

1. Record Nr.	UNISALENTO991001080859707536
Autore	Autorino Stanzone, Gabriella
Titolo	Divorzio e tutela della persona : l'esperienza francese, italiana e tedesca / Gabriella Autorino Stanzone
Pubbl/distr/stampa	Napoli : Edizioni scientifiche italiane, 1981
Descrizione fisica	331 p. ; 24 cm.
Collana	Pubblicazioni della Scuola di perfezionamento in diritto civile dell'Università di Camerino ; 25
Disciplina	346.0166
Soggetti	Divorzio - Francia - Legislazione Divorzio - Germania - Legislazione Divorzio - Italia - Legislazione
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr.	UNINA9910967806703321
Autore	Libet Benjamin <1916-2007.>
Titolo	Mind time : the temporal factor in consciousness // Benjamin Libet
Pubbl/distr/stampa	Cambridge, Mass., : Harvard University Press, 2004
ISBN	9780674040168 0674040163
Descrizione fisica	1 online resource (271 p.)
Collana	Perspectives in cognitive neuroscience
Disciplina	153
Soggetti	Consciousness Time perception Memory Cognitive neuroscience
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references (p. [225]-240) and index.
Nota di contenuto	Frontmatter -- CONTENTS -- FOREWORD -- PREFACE -- 1 INTRODUCTION TO THE QUESTION -- 2 THE DELAY IN OUR CONSCIOUS SENSORY AWARENESS -- 3 UNCONSCIOUS AND CONSCIOUS MENTAL FUNCTIONS -- 4 INTENTION TO ACT: DO WE HAVE FREE WILL? -- 5 CONSCIOUS MENTAL FIELD THEORY: EXPLAINING HOW THE MENTAL ARISES FROM THE PHYSICAL -- 6 WHAT DOES IT ALL MEAN? -- BIBLIOGRAPHY -- INDEX
Sommario/riassunto	Our subjective inner life is what really matters to us as human beings-- and yet we know relatively little about how it arises. Over a long and distinguished career Benjamin Libet has conducted experiments that have helped us see, in clear and concrete ways, how the brain produces conscious awareness. For the first time, Libet gives his own account of these experiments and their importance for our understanding of consciousness. Most notably, Libet's experiments reveal a substantial delay--the "mind time" of the title--before any awareness affects how we view our mental activities. If all conscious awarenesses are preceded by unconscious processes, as Libet observes, we are forced to conclude that unconscious processes initiate our conscious experiences. Freely voluntary acts are found to be initiated unconsciously before an awareness of wanting to act--a discovery with profound ramifications

for our understanding of free will. How do the physical activities of billions of cerebral nerve cells give rise to an integrated conscious subjective awareness? How can the subjective mind affect or control voluntary actions? Libet considers these questions, as well as the implications of his discoveries for the nature of the soul, the identity of the person, and the relation of the non-physical subjective mind to the physical brain that produces it. Rendered in clear, accessible language, Libet's experiments and theories will allow interested amateurs and experts alike to share the experience of the extraordinary discoveries made in the practical study of consciousness. Table of Contents: Foreword Preface 1. Introduction to the Question 2. The Delay in Our Conscious Sensory Awareness 3. Unconscious and Conscious Mental Functions 4. Intention to Act: Do We Have Free Will? 5. Conscious Mental Field Theory: Explaining How the Mental Arises from the Physical 6. What Does It All Mean? Bibliography Index

Reviews of this book: Libet only dared switch to the study of consciousness after he got tenure. It is fortunate for us that he did, and that he has presented us here with what amounts to a retrospective exhibition of his work. The refreshing result is that we are immediately engaged in an earnest one-to-one tutorial with [him]. In [his] work, philosophers have found grist for what they do best. Indeed, his experiments must rank as one of the major contributions of experimental psychology to modern philosophy of mind. [W]hether or not one agrees with his thesis or not, one must acknowledge that his pioneering experimental work has certainly been stimulating.--Kevan Martin, Nature

Reviews of this book: What makes Benjamin Libet different from all the others writing on [consciousness] is that he has actually spent the past 40 years experimenting on the topic. His findings have played a central role in others' speculations. Now he has put his life's work into a single short book.--Steven Rose, New Scientist [UK]

Mind Time makes for extremely interesting, engaging reading. Its discussions of consciousness, subjectivity, free will, and perception will intrigue anybody in philosophy or psychology interested in those topics. This is a valuable book to have available.--David Rosenthal, Philosophy and Cognitive Science Graduate Center, City University of New York

Benjamin Libet's discoveries are of extraordinary interest. His is almost the only approach yet to yield any credible evidence of how conscious awareness is produced by the brain. Mind Time endeavors to clarify these startling observations for the general public, set them in proper framework of neuroscientific knowledge, and probe their philosophical meaning. Libet's work is unique, and speaks to questions asked by all humankind.--Robert W. Doty, PhD, Professor of Neurobiology and Anatomy, University of Rochester
