Sommario/riassunto	The focus of this collective volume is on the mutual determination of language structure, discourse patterns and the accessibility to consciousness of mental contents of different types of organization and complexity. The contributions address the following problems, among others: the history of the interpretation of 'conscious' and 'unconscious' mind in the theoretical discourse of modern linguistics; the determination of the structure of consciousness by the grammatical structure; the levels of access of grammatical and lexical information to consciousness; the development of cognitive complexity and control in

ontogeny; pathologies of consciousness access in discourse comprehension and production; the cognitive contextual prerequisites for the representation of meaning in consciousness; the relationships between language structure and qualia in the phenomenology of experience; the dialogical structure of intentionality and meaning representation, etc. (Series B).
