1. Record Nr.   UNINA9910968150203321

   Titolo   Ergativity in Amazonia / / edited by Spike Gildea, Francesc Queixalos

   Pubbl/distr/stampa Philadelphia, PA, : John Benjamins, 2010

   ISBN   9786612558696
                       9781282558694
                       1282558692
                       9789027288509
                       902728850X

   Edizione   [1st ed.]

   Descrizione fisica 319 p

   Collana   Typological studies in language, , 0167-7373 ; ; 89

   Classificazione   EE 7250

   Altri autori (Persone) GildeaSpike
                           QueixalosFrancesc

   Disciplina   415

   Soggetti   Grammar, Comparative and general - Ergative constructions
                       Indians of South America - Amazon River Region - Languages

   Lingua di pubblicazione Inglese

   Formato   Materiale a stampa

   Livello bibliografico Monografia

   Note generali   Bibliographic Level Mode of Issuance: Monograph

   Nota di bibliografia Includes bibliographical references and index.

                       Bruna Franchetto -- Nominative-absolutive: Counter-universal split
                       ergativity in Je and Cariban / Spike Gildea and Flavia de Castro Alves --
                       PART II. Recent diachronic innovations: Syntactic ergativity: Ergativity in
                       Trumai / Raquel Guirardello-Damian -- Grammatical relations in
                       Katukina-Kanamari / Francesc Queixalos -- The intransitive basis of
                       Movima clause structure / Katharina Haude.

   Sommario/riassunto This volume presents a typological/theoretical introduction plus eight
                       papers about ergative alignment in 16 Amazonian languages. All are
                       written by linguists with years of fieldwork and comparative experience
                       in the region, all describe details of the synchronic systems, and several
                       also provide diachronic insight into the evolution of these systems. The
                       five papers in Part I focus on languages from four larger families with

ergative patterns primarily in morphology. The typological contribution is in detailed consideration of unusual splits, changes in ergative patterns, and parallels between ergative main clauses and nominalizations. The three papers in Part II discuss genetically isolated languages. Two present dominant ergative patterns in both morphology and syntax, the other a syntactic inverse system that is predominantly ergative in discourse. In each, the authors demonstrate that identification of traditional grammatical relations is problematic. These data will figure in all future typological and theoretical debates about grammatical relations.
