Sommario/riassunto	"A central theme of this book is the gradual process of separation

between parents and toddlers and the growth of autonomy in them all. Jenny Stoker has written with clarity, sympathy and warmth about the multiple problems children face in their toddler years and she has addressed the parents with immense empathy. Stoker manages to convey complex concepts and arguments in a lucid and simple style that all readers will find most helpful.'Each of the authors featured has published papers and books for the academic and clinical communities; the present volumes, however, are specifically aimed at parents. The intent is not to convince but to inform the reader. Rather than offering solutions, we are describing, explaining and discussing the problems that parents meet while bringing up their children, from infancy through to adulthood.'We try to provide portraits of the various stages in the child's cognitive, intellectual, and emotional development and how these unfolding stages affect not only the child's experience of himself, but also how he perceives and relates to the world in which he lives."--Provided by publisher.

## Sommario/riassunto

Ilkka Niiniluoto comes to the rescue of realism in the philosophy of science. Philosophical realism holds that the aim of a particular discourse is to make true statements about its subject-matter. Niiniluoto surveys different kinds of realism in various areas of philosophy, then sets out his own critical realist philosophy of science, characterizing scientific progress in terms of increasing truthlikeness, and defends this theory against its rivals.
