   Sommario/riassunto Psychology of Aid provides an original, psychological approach to
                       development studies, focusing as it does on the social aspects of aid
                       and the motivational foundations. Designed as a practical tool for
                       looking at development projects in a new and structured way, the
                       authors bring many of the social aspects of development and aid
                       together in one book; from the needs of the Northern donor to the
                       public tensions between Third World host and foreign development
                       agencies.
