Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Contents; Preface; About the Authors; Acknowledgments; Abbreviations; Overview; Figures; 1: Introduction; Boxes; Tables; 2: Electric Power; 3: Oil and Gas; 4: Energy End-Use; 5: Transport; 6: Agriculture and Forestry; 7: A Low-Carbon Scenario for Mexico; 8: Elements of a Low-Carbon Development Program; Appendixes; Bibliography; Index
Sommario/riassunto	To reduce the risk of climate change impacts it is necessary for the world to lower the carbon intensity of economic development. Experts estimates the net costs, greenhouse gas (GHG) emission reductions, and investment that would be needed to achieve a low-carbon scenario in Mexico to the year 2030. Among the key findings Energy efficiency. Improving energy end-use efficiency is the least-cost option for reducing carbon emissions and can be achieved by accelerating current Mexican programs and policies. Supply efficiency and renewable energy. Mexico can lower the carbon intensity of the econ
