| 1. Record Nr. | UNINA9910969330103321 |
| Autore | Philoponus John <active 6th century, > |
| Titolo | On Aristotle Meteorology 1.4-9, 12 / Philoponus ; translated by Inna Kupreeva |
| Pubbl/distr/stampa | London, : Bloomsbury Academic, 2012 |
| ISBN | 9781472551863 1472551869 9781472501745 1472501748 |
| Edizione | [1st ed.] |
| Descrizione fisica | 1 online resource (207 p.) |
| Collana | Ancient commentators on Aristotle |
| Disciplina | 185 551.5 |
| Soggetti | Meteorology |
| Lingua di pubblicazione | Inglese |
| Formato | Materiale a stampa |
| Livello bibliografico | Monografia |
| Note generali | "Paperback edition first published 2014"--T. p. verso. "Reprinted 2013"--T. p. verso. |
| Nota di bibliografia | Includes bibliographical references and index |
| Nota di contenuto | Introduction -- Textual Emendations -- Translation -- Notes -- Bibliography -- English-Greek Glossary -- Greek-English Index -- Index of Passages Cited -- General Index |
| Sommario/riassunto | "Of Philoponus' commentary on the Meteorology only that on chapters 1-9 and 12 of the first book has been preserved. It is translated in this series in two volumes, the first covering chapters 1-3; the second (this volume) chapters 4-9 and 12. The subjects discussed here include the nature of fiery and light phenomena in the sky, the formation of comets, the Milky Way, the properties of moist exhalation, and the formation of hail. Philoponus pays special attention to the distinction between the apparent and the real among the sky phenomena; he criticises Aristotle's theory of the Milky Way as sublunary, and argues for its origin in the heavenly realm; gives a detailed exposition of Aristotelian theory of antiperistasis, mutual replacement of the hot and the cold, as the mechanism of condensation and related processes. As in the first volume, Philoponus demonstrates scholarly erudition and familiarity with methods and results of post-Aristotelian Greek science. Despite the fragmented state of the work and the genre of |

commentary, the reader will find the elements of a coherent picture of the cosmos based on a radical re-thinking of Aristotelian meteorology and physics. The volume will be of interest to all students of ancient and medieval philosophy, history of Early Modern philosophy, history and philosophy of science."--Bloomsbury Publishing

Of Philoponus' commentary on the Meteorology only that on chapters 1-9 and 12 of the first book has been preserved. It is translated in this series in two volumes, the first covering chapters 1-3; the second (this volume) chapters 4-9 and 12. The subjects discussed here include the nature of fiery and light phenomena in the sky, the formation of comets, the Milky Way, the properties of moist exhalation, and the formation of hail. Philoponus pays special attention to the distinction between the apparent and the real among the sky phenomena; he criticises Aristotle's theory of the Milky Way as sublunary, and argues for its origin in the heavenly realm; gives a detailed exposition of Aristotelian theory of antiperistasis, mutual replacement of the hot and the cold, as the mechanism of condensation and related processes. As in the first volume, Philoponus demonstrates scholarly erudition and familiarity with methods and results of post-Aristotelian Greek science. Despite the fragmented state of the work and the genre of commentary, the reader will find the elements of a coherent picture of the cosmos based on a radical re-thinking of Aristotelian meteorology and physics.
