1. Record Nr. UNINA9910969876103321

Autore	Seeber Gunter <1941->
Titolo	Satellite geodesy / / Gunter Seeber
Pubbl/distr/stampa	Berlin ; ; New York, : Walter de Gruyter, 2003
ISBN	9786612195082 9781282195080 1282195085 9783110200089 3110200082
Edizione	[2nd completely rev. and extended ed.]
Descrizione fisica	1 online resource (612 p.)
Classificazione	ZI 9120
Disciplina	526/.1
Soggetti	Satellite geodesy
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. [539]-574) and index.
Nota di contenuto	Front matter -- Contents -- 1. Introduction -- 2. Fundamentals -- 3. Satellite Orbital Motion -- 4. Basic Observation Concepts and Satellites Used in Geodesy -- 5. Optical Methods for the Determination of Directions -- 6. Doppler Techniques -- 7. The Global Positioning System (GPS) -- 8. Laser Ranging -- 9. Satellite Altimetry -- 10. Gravity Field Missions -- 11. Related Space Techniques -- 12. Overview and Applications -- Backmatter
Sommario/riassunto	This book covers the entire field of satellite geodesy and is intended to serve as a textbook for advanced undergraduate and graduate students, as well as a reference for professionals and scientists in the fields of engineering and geosciences such as geodesy, surveying engineering, geomatics, geography, navigation, geophysics and oceanography. The text provides a systematic overview of fundamentals including reference systems, time, signal propagation and satellite orbits, together with observation methods such as satellite laser ranging, satellite altimetry, gravity field missions, very long baseline interferometry, Doppler techniques, and Global Navigation Satellite Systems (GNSS). Particular emphasis is given to positioning techniques, such as the NAVSTAR Global Positioning System (GPS), and to applications. Numerous examples are included which refer to recent

results in the fields of global and regional control networks; gravity field modeling; Earth rotation and global reference frames; crustal motion monitoring; cadastral and engineering surveying; geoinformation systems; land, air, and marine navigation; marine and glacial geodesy; and photogrammetry and remote sensing. This book will be an indispensable source of information for all concerned with satellite geodesy and its applications, in particular for spatial referencing, geoinformation, navigation, geodynamics, and operational positioning.
