Titolo	Fetal alcohol syndrome : diagnosis, epidemiology, prevention, and treatment // Kathleen Stratton, Cynthia Howe, and Frederick Battaglia, editors ; Committee to Study Fetal Alcohol Syndrome, Division of Biobehavioral Sciences and Mental Disorders, Institute of Medicine
Pubbl/distr/stampa	Washington, D.C., : National Academy Press, 1996
ISBN	9786610193066 9780309176125 0309176123 9781280193064 1280193069 9780309578073 0309578078 9780585026381 0585026386
Edizione	[1st ed.]
Descrizione fisica	1 online resource (xvi, 213 pages) : illustrations
Altri autori (Persone)	StrattonKathleen R HoweCynthia J BattagliaFrederick C. <1932->
Disciplina	618.3/268
Soggetti	Fetal alcohol spectrum disorders Fetus - Effect of drugs on Fetus - Diseases Pregnancy - Complications Diseases Fetal Alcohol Spectrum Disorders Fetal Diseases Pregnancy Complications Female Urogenital Diseases and Pregnancy Complications Disease Guideline
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"The project was supported by funds from the National Institute on

Nota di bibliografia

Includes bibliographical references and index.

Nota di contenuto

; 1. Introduction -- ; 2. Issues in Research on Fetal Drug Effects -- ; 3. Vignettes -- ; 4. Diagnosis and Clinical Evaluation of Fetal Alcohol Syndrome -- ; 5. Epidemiology and Surveillance of Fetal Alcohol Syndrome -- ; 6. Epidemiology of Women's Drinking -- ; 7. Prevention of Fetal Alcohol Syndrome -- ; 8. The Affected Individual: Clinical Presentation, Intervention, and Treatment -- ; 9. Integration and Coordination: A Concluding Comment and Recommendation.

Sommario/riassunto

It sounds simple: Women who drink while pregnant may give birth to children with defects, so women should not drink during pregnancy. Yet in the 20 years since it was first described in the medical literature, fetal alcohol syndrome (FAS) has proved to be a stubborn problem, with consequences as serious as those of the more widely publicized "crack babies." This volume discusses FAS and other possibly alcohol-related effects from two broad perspectives: diagnosis and surveillance, and prevention and treatment. In addition, it includes several real-life vignettes of FAS children. The committee examines fundamental concepts for setting diagnostic criteria in general, reviews and updates the diagnostic criteria for FAS and related conditions, and explores current research findings and problems associated with FAS epidemiology and surveillance. In addition, the book describes an integrated multidisciplinary approach to research on the prevention and treatment of FAS. The committee Discusses levels of preventive intervention. Reviews available data about women and alcohol abuse and treatment among pregnant women. Explores the psychological and behavioral consequences of FAS at different ages. Examines the current state of knowledge about medical and therapeutic interventions, education efforts, and family support programs. This volume will be of special interest to physicians, nurses, mental health practitioners, school and public health officials, policymakers, researchers, educators, and anyone else involved in serving families and children, especially in high risk populations.
