#### Sommario/riassunto

The proposed textbook contains real-life cases of Endocrinology and Metabolism. It is written in a context-based format, highlighting the patient's presenting problems and demonstrating how to delve into these issues to reach a diagnosis and subsequent management. Students and trainees will learn the approach to evaluating and investigating cases through hands-on training. The book highlights challenging real cases and contemporary investigations, including genetic or molecular diagnoses where applicable. It promotes an active learning process, as it is designed in an MCQ format with self-solving quizzes to stimulate brainstorming within the reader. It will provoke a desire for further learning as readers engage with the discussions in each chapter. While going through this book, readers will be captivated by the unique way each case unfolds and will not feel bored as they might with a regular textbook. This book is primarily great asset for Endocrinologists and training residents/fellows in Endocrinology, but it is also useful for physicians in other specialties, such as Internal medicine Pediatrics and Reproductive Endocrinology. .

Sommario/riassunto	In this witty, accessible study, the prominent Marxist thinker Terry Eagleton launches a surprising defense of the reality of evil, drawing on literary, theological, and psychoanalytic sources to suggest that evil, no mere medieval artifact, is a real phenomenon with palpable force in our contemporary world. In a book that ranges from St. Augustine to alcoholism, Thomas Aquinas to Thomas Mann, Shakespeare to the Holocaust, Eagleton investigates the frightful plight of those doomed souls who apparently destroy for no reason. In the process, he poses a set of intriguing questions. Is evil really a kind of nothingness? Why should it appear so glamorous and seductive? Why does goodness seem so boring? Is it really possible for human beings to delight in destruction for no reason at all?
