

1. Record Nr.	UNINA9910970496003321
Titolo	Dietary reference intakes for vitamin C, vitamin E, selenium, and carotenoids : a report of the Panel on Dietary Antioxidants and Related Compounds, Subcommittees on Upper Reference Levels of Nutrients and of Interpretation and Use of Dietary Reference Intakes, and the Standing Committee on the Scientific Evaluation of Dietary Reference Intakes, Food and Nutrition Board, Institute of Medicine
Pubbl/distr/stampa	Washington, D.C., : National Academy Press, c2000
ISBN	9780309597197 0309597196
Edizione	[1st ed.]
Descrizione fisica	1 online resource (529 p.)
Disciplina	612.3/9
Soggetti	Antioxidants Reference values (Medicine) Vitamin C Vitamin E Carotenoids
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover; Front Matter; Preface; Contents; Summary; 1 Introduction to Dietary Reference Intakes; 2 Vitamin C, Vitamin E, Selenium, and -Carotene and Other Carotenoids: Overview, Antioxidant Definition, and Relationship to Chronic Disease; 3 Vitamin C, Vitamin E, Selenium, and -Carotene and Other Carotenoids: Methods; 4 A Model for the Development of Tolerable Upper Intake Levels for Nutrients; 5 Vitamin C; 6 Vitamin E; 7 Selenium; 8 -Carotene and Other Carotenoids; 9 Uses of Dietary Reference Intakes; 10 A Research Agenda; A Origin and Framework of the Development of Dietary Reference Intakes B Acknowledgments C Dietary Intake Data from the Third National Health and Nutrition Examination Survey (NHANES III), 1988-1994; D Dietary Intake Data from the Continuing Survey of Food Intakes by Individuals (CSFII), 1994-1996; E Canadian Dietary Intake Data, 1993, 1995; F Serum Values from the Third National Health and Nutrition

Examination Survey (NHANES III), 1988-1994; G Options for Dealing with Uncertainties; H Glossary and Acronyms; I Biographical Sketches of Panel and Subcommittee Members; Index

Sommario/riassunto

This volume is the newest release in the authoritative series of quantitative estimates of nutrient intakes to be used for planning and assessing diets for healthy people. Dietary Reference Intakes (DRIs) is the newest framework for an expanded approach developed by U.S. and Canadian scientists. This book discusses in detail the role of vitamin C, vitamin E, selenium, and the carotenoids in human physiology and health. For each nutrient the committee presents what is known about how it functions in the human body, which factors may affect how it works, and how the nutrient may be related to chronic disease. Dietary Reference Intakes provides reference intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for different groups based on age and gender, along with a new reference intake, the Tolerable Upper Intake Level (UL), designed to assist an individual in knowing how much is "too much" of a nutrient.
