

1. Record Nr.	UNINA9910971930603321
Autore	Haghghi Aliakbar Montazer
Titolo	Delayed and Network Queues
Pubbl/distr/stampa	Newark : , : John Wiley & Sons, Incorporated, , 2016 ©2016
ISBN	9781119022145 9781119022138
Edizione	[1st ed.]
Descrizione fisica	1 online resource (417 pages)
Altri autori (Persone)	MishevD. P (Dimiter P.)
Disciplina	004.60151982
Soggetti	Routing (Computer network management)--Mathematics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Cover -- Title Page -- Copyright -- Dedication -- Contents -- Preface -- Chapter 1 Preliminaries -- 1.1 Basics of Probability -- 1.1.1 Introduction -- 1.1.2 Conditional Probability -- 1.2 Discrete Random Variables and Distributions -- 1.3 Discrete Moments -- 1.4 Continuous Random Variables, Density, and Cumulative Distribution Functions -- 1.5 Continuous Random Vector -- 1.6 Functions of Random Variables -- 1.7 Continuous Moments -- 1.8 Difference Equations -- 1.8.1 Introduction -- 1.8.2 Basic Definitions and Properties -- 1.9 Methods of Solving Linear Difference Equations with Constant Coefficients -- 1.9.1 Characteristic Equation Method -- 1.9.2 Recursive Method -- 1.9.3 Generating Function Method -- 1.9.4 Laplace Transform Method -- Exercises -- Chapter 2 Stochastic Processes -- 2.1 Introduction and Basic Definitions -- 2.2 Markov Chain -- 2.2.1 Classification of States -- 2.3 Markov Process -- 2.3.1 Markov Process with Discrete Space State -- 2.4 Random Walk -- 2.5 Up-and-Down Biased Coin Design as a Random Walk -- Exercises -- Chapter 3 Birth and Death Processes -- 3.1 Overviews of the Birth and Death Processes -- 3.2 Finite B-D Process -- 3.3 Pure Birth Process (Poisson Process) -- 3.4 Pure Death Process (Poisson Death Process) -- Exercises -- Chapter 4 Standard Queues -- 4.1 Introduction of Queues (General Birth and Death Process) -- 4.1.1 Mechanism, Characteristics, and Types of Queues -- 4.2 Remarks on Non-Markovian Queues -- 4.2.1 Takács's Waiting Time

Paradox -- 4.2.2 Virtual Waiting Time and Takács's Integro-Differential Equation -- 4.2.3 The Unfinished Work -- 4.3 Stationary M/M/1 Queueing Process -- 4.4 A Parallel M/M/C/K with Balking and Reneging -- 4.5 Stationary M/M/1/K Queueing Process -- 4.6 Busy Period of an M/M/1/K Queue -- 4.7 Stationary M/M/1 and M/M/1/K Queueing Processes with Feedback.

4.7.1 Stationary Distribution of the Sojourn Time of a Task -- 4.7.2 Distribution of the Total Time of Service by a Task -- 4.7.3 Stationary Distribution of the Feedback Queue Size -- 4.7.4 Stationary Distribution of n (Sojourn Time of the n th task) -- 4.8 Queues with Bulk Arrivals and Batch Service -- 4.9 A Priority Queue with Balking and Reneging -- 4.10 Discrete Time M/M/1 Queueing Process, Combinatorics Method (Lattice Paths) -- 4.10.1 The Basic Ballot Problem -- 4.10.2 Ballot Problem (based on Takács 1997) -- 4.10.3 Transient Solution of the M/M/1 by Lattice Path Method -- 4.11 Stationary M/M/C Queueing Process -- 4.11.1 A Stationary Multiserver Queue -- Exercises -- Chapter 5 Queues With Delay -- 5.1 Introduction -- 5.2 A Queuing System with Delayed Service -- 5.3 An M/G/1 Queue with Server Breakdown and with Multiple Working Vacation -- 5.3.1 Mathematical Formulation of the Model -- 5.3.2 Steady-State Mean Number of Tasks in the System -- 5.3.3 A Special Case -- 5.4 A Bulk Queuing System Under N-Policy with Bilevel Service Delay Discipline and Start-Up Time -- 5.4.1 Analysis of the Model -- 5.5 Interrelationship between N-Policy M/G/1/K and F-Policy G/M/1/K Queues with Start-up Time -- 5.5.1 N-Policy M/G/1/K Queuing System with Exponential Start-up Time -- 5.5.2 F-Policy G/E/1/K Queuing System with Exponential Start-up Time -- 5.6 A Transient M/M/1 Queue Under (M, N)-Policy, Lattice Path Method -- 5.6.1 Solution in Discrete Time -- 5.6.2 Solution in Continuous Time -- 5.7 Stationary M/M/1 Queueing Process with Delayed Feedback -- 5.7.1 Distribution of the Queue Length -- 5.7.2 Mean Queue Length and Waiting Time -- 5.8 Single-Server Queue with Unreliable Server and Breakdowns with an Optional Second Service -- 5.9 A Bulk Arrival Retrial Queue with Unreliable Server -- 5.9.1 The Model -- 5.9.2 Model Analysis -- 5.9.3 Steady-State System Analysis.

5.9.4 Performance Measures -- 5.9.5 Numerical Illustration -- 5.10 Multiserver Queue with Retrial Feedback Queueing System with Two Orbits -- 5.11 Steady-State Stability Condition of a Retrial Queueing System with Two Orbits, Reneging, and Feedback -- 5.11.1 Necessary Stability Condition for the Steady-State System -- 5.12 Batch Arrival Queue with General Service in Two Fluctuating Modes and Reneging During Vacation and Breakdowns -- 5.12.1 The Model -- 5.12.2 Analysis -- Exercises -- Chapter 6 Networks of Queues with Delay -- 6.1 Introduction to Networks of Queues -- 6.2 Historical Notes on Networks of Queues -- 6.3 Jackson's Network of Queues -- 6.3.1 Jackson's Model -- 6.4 Robustness of Networks of Queues -- 6.5 A MAP Single-Server Queueing System with Delayed Feedback as a Network of Queues -- 6.5.1 Description of the Model -- 6.5.2 Service Station -- 6.5.3 Stepwise Explicit Joint Distribution of the Number of Tasks in the System: General Case When Batch Sizes Vary Between a Minimum k and a Maximum K -- 6.6 Unreliable Networks of Queueing System Models -- 6.6.1 Unreliable Network Model of Goodman and Massey -- 6.6.2 Unreliable Network of Queues Model of Myłosz and Daduna -- 6.6.3 Unreliable Network of Queues Model of Gautam Choudhury, Jau-Chuan Ke, and Lotfi Tadj: A Queueing System with Two Network Phases of Services, Unreliable Server, Repair Time Delay under N-Policy -- 6.7 Assessment of Reliability of a Network of Queues -- 6.8 Effect of Network Service Breakdown -- 6.8.1 The Model

Sommario/riassunto

Presents an introduction to differential equations, probability, and stochastic processes with real-world applications of queues with delay and delayed network queues. Featuring recent advances in queueing theory and modeling, *Delayed and Network Queues* provides the most up-to-date theories in queueing model applications. Balancing both theoretical and practical applications of queueing theory, the book introduces queueing network models as tools to assist in the answering of questions on cost and performance that arise throughout the life of a computer system and signal processing. Written by well-known researchers in the field, the book presents key information for understanding the essential aspects of queues with delay and networks of queues with unreliable nodes and vacationing servers. Beginning with simple analytical fundamentals, the book contains a selection of realistic and advanced queueing models that address current deficiencies. In addition, the book presents the treatment of queues with delay and networks of queues, including possible breakdowns and disruptions that may cause delay. *Delayed and Network Queues* also features: Numerous examples and exercises with applications in various fields of study such as mathematical sciences, biomathematics, engineering, physics, business, health industry, and economics. A wide array of practical applications of network queues and queueing systems, all of which are related to the appropriate stochastic processes. Up-to-date topical coverage such as single- and multiserver queues with and without delays, along with the necessary fundamental coverage of probability and difference equations. Discussions on queueing models such as single- and multiserver Markovian queues with balking, reneging, delay, feedback, splitting, and blocking, as well as their role in the treatment of networks of queues with and without delay and network reliability. *Delayed and Network Queues* is an excellent textbook for upper-undergraduate and graduate-level courses in applied mathematics, queueing theory, queueing systems, probability, and stochastic processes. The book is also an ideal reference for academics and practitioners in mathematical sciences, biomathematics, operations research, management, engineering, physics, business, economics, health industry, and industrial engineering. Aliakbar Montazer Haghighi, PhD, is Professor and Head of the Department of Mathematics at Prairie View A&M University, USA, as well as founding Editor-in-Chief of *Applications and Applied Mathematics: An International Journal* (AAM). His research interests include probability, statistics, stochastic processes, and queueing theory. Among his research publications and books, Dr. Haghighi is the coauthor of *Difference and Differential Equations with Applications in Queueing Theory* (Wiley, 2013). Dimitar P. Mishev, PhD, is Professor in the Department of Mathematics at Prairie View A&M University, USA. His research interests include differential and difference equations and queueing theory. The author of numerous research papers and three books, Dr. Mishev is the coauthor of *Difference and Differential Equations with Applications in Queueing Theory* (Wiley, 2013).
