Economics; From cosmology to language; Economic actions and their symmetrically inverse counterparts; From language to theory

ConclusionAppendix 1 Mirowski on science and economics; Appendix 2

Marx's economics: successes and failures; Notes; Bibliography; Index

Sommario/riassunto

Is there a language which is adequate to describe our own economy? In this volume, Michel Verdon undertakes a path-breaking analysis of the three major paradigms in economics: Marxian economics, neo-classical economics and Keynesian economics. Each of these, he argues, has an inherent cosmology, and in the case of both Marxian and neo-classical economics these preclude the development of a language which can accurately describe and analyse an economy.
