

1. Record Nr.	UNINA9910972342403321
Titolo	Air transportation systems engineering / / edited by George L. Donohue ... [et al.]
Pubbl/distr/stampa	Reston, Va., : American Institute of Aeronautics and Astronautics, c2001
ISBN	1-60086-663-8 1-60086-444-9 1-60119-205-3
Edizione	[1st ed.]
Descrizione fisica	1 online resource (743 p.)
Collana	Progress in astronautics and aeronautics ; ; v. 193
Altri autori (Persone)	DonohueGeorge L
Disciplina	387.7/40426
Soggetti	Aeronautics - Systems engineering Air traffic control - Management
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	""Cover""; ""Title""; ""Copyright""; ""Table of Contents""; ""Preface""; ""Chapter 1 Introduction""; ""Section I: U.S. and European ATM Systems €?Similarities and Differences""; ""Chapter 2 Air Traffic Management Capacity-Driven Operational Concept Through 2015""; ""Introduction""; ""Preliminary Design for the NAS""; ""Operational Concept Development""; ""Functions, Agents, and Performance""; ""ATM System Functional Structure""; ""Capacity, Safety, and Separation Assurance""; ""Capacity-Driven Operational Concept""; ""National Level Flow Management""; ""En Route and Outer Terminal Area"" ""Approach/Departure Transition""""Final Approach""; ""Surface""; ""Efficiency in Low Density En Route Airspace""; ""Conclusions""; ""References""; ""Chapter 3 Comparison of U.S. and European Airports and Airspace to Support Concept Validation""; ""Introduction""; ""Assessment Territory""; ""Metrics and Measures""; ""Assessment and Findings""; ""Conclusion""; ""References""; ""Chapter 4 Performance Review in Europe""; ""Introduction""; ""Background""; ""European Challenge""; ""Other Limitations on Growth""; ""Conclusions"" ""Chapter 5 United States and European Airport Capacity Assessment Using the GMU Macroscopic Capacity Model""""Introduction""; ""MCM Approach""; ""MCM Validation""; ""MCM Assessment of U.S. and

#### Sommario/riassunto

Air transportation is in a crisis and at a turning point. The world's air traffic management system is showing the signs of being so successful that its growth is approaching the physical infrastructure capacity limits. This title explains the technical nature of, and reports on research on, the evolution of the international air transportation systems. It also provides approaches to airspace management and new roles for controllers and pilots. It should further our understanding of the technical attributes of delay and its economic affects on aviation related business. The text also provides approaches to airspace management and new roles for controllers and pilots while applying mathematical analyses and principles to aviation.
