## Sommario/riassunto

The papers of this volume investigate how grammar codes the subjective viewpoint of human language users, that is, how grammar reflects human conceptualization. Some of the articles deal with spatial relations and locations. They discuss how basic attributes of human conceptualization are encoded in the grammatical expression of spatial relations. Other articles concern embodiment in language, showing how conceptualization is mediated by one's embodied experience of the world and ourselves. Finally, some of the articles discuss coding of person focusing on the subjectivity of conceptualization and how it is reflected in grammar. The articles show that conceptualization reflects the speaker's construal of the situation, and furthermore, that it is intersubjective because it reflects the speaker's understanding of the relations between the speech act participants. The papers deal with Finnish, utilizing the rich resources of Finnish grammar to contribute to issues in contemporary linguistics and in particular to Cognitive Grammar.

Sommario/riassunto	Bits and Pieces: Screening Animal Life and Death gathers pivotal and more mundane moments, dispersed across a predominantly Western history of moving images, in which animals materialize in movies and TV shows, from iconic scenes of cattle slaughter in early Soviet montage to quandaries over hunting trophies in recent home-renovation reality TV series, to animals in Black horror films. Sarah O'Brien carefully views these fragments in dialogue with germinal texts at the intersection of animal studies, film and television studies, and cultural studies. She explores the capacity of moving images to unsettle the ways in which audiences have become habituated to viewing animal life and death on screens, and, more importantly, to understanding these images as more and less connected to the "production for consumption" of animals that is specific to modern industrialization. By looking back at films and TV series in which the places and practices of killing or keeping animals enter, occupy, or slip from the foreground, Bits and Pieces takes seriously the idea that cinema and television have

the capacity not only to catch but to challenge and change viewers'  
regard for animals.
