

1. Record Nr.	UNINA9910972863603321
Autore	Follain Nadege
Titolo	Amines grafted cellulose materials / / Nadege Follain
Pubbl/distr/stampa	New York, : Nova Science Publishers, c2010
ISBN	1-61668-494-1
Edizione	[1st ed.]
Descrizione fisica	1 online resource (78 p.)
Collana	Materials science and technologies Novinka
Soggetti	Cellulose - Oxidation Amines
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. [57]-62) and index.
Sommario/riassunto	Native cellulose is a structural material that is biosynthesized as microfibrils by a number of living organisms ranging from higher and lower plants, to some amoebae, sea animals, bacteria and fungi. This book highlights the methods of preparing the cellulose conjugates which can be water-soluble materials or water-insoluble materials.
