| Sommario/riassunto | This book collects ten complementary essays on different aspects of financial sector policy for developing and transitional economies. The essays, by leading theoreticians and practitioners, draw on the history |

and experience of financial sector policy reforms to derive lessons for the future. The collection is carefully chosen to cover the major contemporary issues, including both crisis avoidance and institution-building. The increasing importance of non-bank finance and of international linkages (including dollarization) for small economies are given special attention.
