Sommario/riassunto

This monograph offers a new analysis of West Germanic 'Infinitivus Pro Participio' (IPP) constructions, within the framework of Optimality Theory. IPP constructions have long been problematic for syntactic theory, because a bare infinitive is preferred over the expected past participle. The book shows how the substitution of the past participle by the infinitive in IPP constructions can be captured straightforwardly if constraints are assumed to be violable. The basic idea is that IPP constructions are exceptional because they violate otherwise valid rules of the language. Thus, IPP is a 'last resort' or repair strategy, which is only visible in cases in which the past participle would be 'even worse'. Furthermore, as the choice of Optimality Theory naturally leads to a crosslinguistic account, the book systematically examines and compares infinitival constructions from seven West Germanic languages including Afrikaans, Dutch, German, West Flemish, and three Swiss German dialects.

Sommario/riassunto

The main aim of this book is to understand the interplay between the SDGs and urban health. This is a critical issue in cities, considering the complexity of health issues and how they transcend most SDGs. However, the SDGs are premised on a broad set of generalised indicators and targets. Simultaneously, local contexts differ; thus, a one-size-fits-all understanding of urban health problems is not helpful. Therefore, the SDGs require Health in All Policies (HiAP) – “an approach to public policy across sectors that systematically takes into account the health implications of decisions, seeks synergies and avoids harmful health impacts to improve population health and health equity” (Ramirez-Rubio et al. 2019). In applying the HiAP concept, this book adopts a case study approach and considers the poor neighborhoods of a South African city, specifically Bloemfontein, part of the Mangaung Metropolitan Municipality. Each chapter presented in the book considers a particular SDG and how that goal relates to urban health.
