| Sommario/riassunto      | "The experience of illness (both mental and physical) figures prominently in the critical thought and activism of the 1960s and 1970s, though it is largely overshadowed by practices of sexuality. Lisa Diedrich explores how and why illness was indeed so significant to the social, political, and institutional transformation beginning in the '60s through the emergence of AIDS in the United States. A rich intervention--both theoretical and methodological, political and   |

therapeutic--Indirect Action illuminates the intersection of illness, thought, and politics. Not merely a revision of the history of this time period, Indirect Action expands the historiographical boundaries through which illness and health activism in the U.S. have been viewed. Diedrich explores the multiplicity illness-thought-politics through an array of subjects: queering the origin story of AIDS activism by recalling its feminist history; exploring health activism and the medical experience; analyzing psychiatry and self-help movements; thinking ecologically about counter-practices of generalism in science and medicine; and considering the experience and event of epilepsy and the witnessing of schizophrenia. Indirect Action places illness in the leading role in the production of thought during the emergence of AIDS, ultimately showing the critical interconnectedness of illness and political and critical thought"--

Sommario/riassunto

Goat Science and Production presents comprehensive, state-of-the-art information on the science of goats and goat production for meat, dairy, and fiber. Chapters provide a fundamental understanding of the goat anatomy and physiology as well as production issues such as welfare, disease management, and feeding. Goat Science and Production is an essential introduction and reference to this increasingly important production animal.
