| Titolo | Aneuploidy : etiology, disorders and risk factors // Salvatore de Rossi and Filippo Bianchi, editors |
| Pubbl/distr/stampa | Hauppauge, N.Y., : Nova Science Publishers, c2012 |
| ISBN | 1-62100-215-2 |
| Edizione | [1st ed.] |
| Descrizione fisica | 1 online resource (185 p.) |
| Collana | Genetics--research and issues |
| Altri autori (Persone) | De RossiSalvatore BianchiFilippo <1964-> |
| Disciplina | 616/.042 |
| Soggetti | Aneuploidy |
| Lingua di pubblicazione | Inglese |
| Formato | Materiale a stampa |
| Livello bibliografico | Monografia |
| Note generali | Description based upon print version of record. |
| Nota di bibliografia | Includes bibliographical references and index. |
| Nota di contenuto | Aneuploidy : mechanisms, cancer, and the role of environmental pollutants / Amie L. Holmes, John Pierce Wise Sr. -- Ploidy in mitosis and meiosis : a role of MAPK/Erk network / Franck Riquet, Pauline Vandame, Jean-Francois Bodart -- The spindle assembly checkpoint and aneuploidy / Juliana Faria ... [et al.] -- The role of centromere cohesion and associated proteins in Alzheimer's disease : a relation to aneuploidy? / V.P Bajic ... [et al.] -- Cohesins, genomic stability, and cancer / Jose L. Barbero -- Adult neurogenesis and aneuploidy in etiology, pathogenesis, and pathology of Alzheimer's disease / Philippe Taupin -- Aneuploidy in cultured human multipotent mesenchymal stromal cells / V.A. Nikitina ... [et al.] -- Somatic and germ cells spontaneous aneuploidy level in healthy fertile people / N. Zotova ... [et al.] -- Sperm aneuploidy and male fertility / El-Sayed A. Mohamed, Myung-Geol Pang -- Role of mammalian ChlR1 in chromosome segregation in mitosis / Akira Inoue. |
| Sommario/riassunto | Book Description: Aneuploidy is an abnormal number of chromosomes, and is a type of chromosome abnormality. An extra or missing chromosome is a common cause of genetic disorders. Some cancer cells also have abnormal numbers of chromosomes. Aneuploidy occurs during cell division when the chromosomes do not separate properly between the two cells. Chromosome abnormalities occur in 1 of 160 live births. In this book, the authors present topical research in the study of the etiology, disorders and risk factors of aneuploidy, |

including the role of environmental pollutants as a mechanism of aneuploidy; ploidy in mitosis and meiosis; the spindle assembly checkpoint and aneuploidy; cohesions, genomic stability and cancer and aneuploidy in cultured human multipotent mesenchymal stromal cells. (Imprint: Nova Biomedical)

| Sommario/riassunto | The book reveals how ableism permeates cultural portrayals of crime. |

What does it mean to consume crime narratives that are so thoroughly ableist? While there are many interpretations of crime in media, there is not yet a sustained analysis of its ableist underpinnings and the social and cultural significance of its seemingly endless consumption. Using a range of texts as illustrative material, each chapter explores a strand of the ableist imaginary, how it underpins crime narrativization, and how it is normalized via our consumption. The book argues that the portrayal of crime constitutes a major site for the articulation and defense of ableist thinking. As such, it is a cultural practice replete with symbolic, social and political effects that hamper the lives of disabled people while securing the privileges appended to bodyminds that pass as "normal." Drawing on radical constructivist logic, the book speaks to those interested in representations of crime and contributes to the emerging subfield of crip criminology. Ronald Kramer is Senior Lecturer in Criminology at University of Auckland, New Zealand. His previous books include *Contesting Crime Science: Our Misplaced Faith in Crime Prevention Technology; Culture, Crime and Punishment*; and *The Rise of Legal Graffiti Writing in New York and Beyond*.
