Sommario/riassunto	This paper evaluates the bias of the least-squares-with-dummy-variables (LSDV) method in fiscal reaction function estimations. A growing number of studies estimate fiscal policy reaction functions—that is, relationships between the primary fiscal balance and its determinants, including public debt and the output gap. A previously unexplored methodological issue in these estimations is that lagged debt is not a strictly exogenous variable, which biases the LSDV estimator in short panels. We derive the bias analytically to understand its determinants and run Monte Carlo simulations to assess its likely size in empirical work. We find the bias to be smaller than the bias of the LSDV estimator in a comparable autoregressive dynamic panel model and show the LSDV method to outperform a number of alternatives in estimating fiscal reaction functions.

Sommario/riassunto

The selected articles compiled in the present volume are based on contributions prepared for the 17th International L.A.U.D. (Linguistic Agency University of Duisburg) Symposium held at the University of Duisburg on 23-27 March 1992. The 13 papers in this book focus on problems and issues of intercultural communication. The first part is devoted to theoretical aspects related to the interaction of language and culture and deals with the issue from anthropological, cognitive, and linguistic points of view. Part II raises issues of language policy and language planning such as the manipulation o
