## Sommario/riassunto

Unparalleled in its scope and depth, this book brings together proteomic approaches in diagnosis and treatment from all clinical fields, including clinical toxicology. The result is a new discipline in molecular medicine that will revolutionize the treatment and prevention of cancer, stroke and other severe diseases. Following an overview of clinical proteomics, the authors look at the technologies available, before moving on to cancer, cardiopulmonary disease, diabetes and stroke. A whole section is devoted to toxicity and the work is rounded off with a discussion of the future of clinical

Sommario/riassunto	Using Richard E. Neustadt's analytical framework of presidential power, Bowles develops five case studies around Nixon's economic policies. These analyses help readers understand the sources of Nixon's authority and power and his use of both, and demonstrate the implications of authority and power for understanding the institution of the presidency.
