Sommario/riassunto

This volume explores the scientific frontiers and leading edges of
 research across the fields of anthropology, economics, political science,
 psychology, sociology, history, business, education, geography, law,
 and psychiatry, as well as the newer, more specialized areas of artificial
 intelligence, child development, cognitive science, communications,
 demography, linguistics, and management and decision science. It
 includes recommendations concerning new resources, facilities, and
 programs that may be needed over the next several years to ensure
 rapid progress and provide a high level of returns to basic research.
