   Livello bibliografico   Monografia

   Sommario/riassunto   This volume presents papers from the fourth biennial Information
                                 Systems Foundation Workshop, held at The Australian National
                                 University in Canberra from 2-3 October, 2008. The focus of the
                                 workshop was, as for the others in the series, the foundations of
                                 Information Systems as an academic discipline. The emphasis in this
                                 workshop was on the movement known as 'Design Science' and its
                                 importance in practical disciplines such as Information Systems. The
                                 chapters in the volume provide a critical examination of current design
                                 science ideas, with the role of human creativity given special mention.
                                 The philosophical underpinnings of design science thinking are also
                                 examined. Practically, the volume shows how the design science
                                 approach can be used in academic research that leads to artefacts that
                                 add value for individuals, organizations and society.
