Sommario/riassunto

There is increasing understanding, globally, that climate change will have profound and mostly harmful effects on human health. This authoritative book brings together international experts to describe both direct (such as heat waves) and indirect (such as vector-borne disease incidence) impacts of climate change, set in a broad, international, economic, political and environmental context. This unique book also expands on these issues to address a third category of potential longer-term impacts on global health: famine, population dislocation, and conflict. This lively yet scholarly resource

Sommario/riassunto

This book focuses on Calabria as an ancient land of Italy from its origin to the early Middle Ages. The place name referred to the Salento peninsula, also called Messapia, as part of present-day Puglia and later to the land of the Bruttii, now the region of Calabria. This work is the first to carefully evaluate linguistic and historical studies in a comprehensive and monographic form. Following an interdisciplinary approach, the systematic combination of Linguistics and Landscape History guides the research step by step. The sample represents a new significant methodological instance that merges Toponymy, History, Archaeology, Topography, and Philology. See Less
