Sommario/riassunto	The monograph &quot;Multilevel Models. The Use of Regional Data in Microeconomic and Sociological Research&quot; presents the methods of conducting the analysis of individual level arrangements under the conditions of mesoeconomic categories availability. Both linear and generalized linear multilevel models have been discussed, and also methods for estimating multilevel parameters, multiequation probit models and multilevel models that take into consideration the problem of sample selection have been proposed. The empirical applications contained in the publication concern such issues as remuneration, business innovation, the way of reacting to the occurrence of a legal problem.
