Nota di contenuto	Smart Renewable Energy Systems and decarbonisation -- Internet of Things: Applications, Enablers, Security -- One-dimensional photonic crystals: Fundamentals and applications -- Health Monitoring Systems for the Renewable Energy -- Energy performances of a photovoltaic thermal plant using different -- New methods developed for precision agriculture -- Image blur control benefits to visual servo control in robotics -- Agrivoltaics: novel systems to optimize the food water

energy nexus -- Fault Detection and Diagnosis applied to photovoltaic power plants -- Machine Learning for Analog Circuits Design.

Sommario/riassunto

This book includes papers presented at the 4th International Conference on Electronic Engineering and Renewable Energy (ICEERE 2024), held in Saidia, Morocco, which focus on the application of artificial intelligence techniques, emerging technology, and the Internet of things in electrical and renewable energy systems, including hybrid systems, micro-grids, networking, smart health applications, smart grid, mechatronics, and electric vehicles. It particularly focuses on new renewable energy technologies for agricultural and rural areas to promote the development of the Euro-Mediterranean region. Given its scope, the book is of interest to graduate students, researchers, and practicing engineers working in the fields of electronic engineering and renewable energy. The book represents Volume 1 for this conference proceedings, which consist of a 2-volume book series.
