## Sommario/riassunto

This book is the first comprehensive introduction to Russian fisheries management in the Western literature. It sets out the basic principles and organisational structure underlying Russian fisheries management and describes associated processes and practices, such as quota allocation, technical regulation and enforcement of fishery legislation. The book focuses attention on fisheries management at the federal level and in Russia's northern fishery basin, which is the largest fishery region in European Russia. Problems such as institutional conflict, alleged corruption and incomplete legislation on fisheries are discussed, as are the assets of scientific and technical expertise found in the country's Soviet legacy. Throughout the book, the performance of the Russian system for fisheries management is evaluated in relation to the requirements of a precautionary approach to fisheries, as set out in contemporary international law.

Sommario/riassunto	This book explores the intersection of advocacy and academic practice within the social sciences, focusing on the ethical dimensions and potential consequences of researchers engaging in political action on behalf of the groups they study. Investigating the ethical and practical implications of advocacy in academic work, specifically within the social sciences. It examines how scholars, guided by their research and vision for social change, engage politically to support the groups they study. The book addresses the debate surrounding academic advocacy: is it

harmful or a necessary pursuit? Through a detailed study of a historical advocacy movement, it analyzes the global campaign to gain legitimacy for new religious movements (NRMs) between 1980 and 2000. It is an important read for scholars of New Religious Movements and those interested in the way religion is studied. Benjamin Beit-Hallahmi is Professor Emeritus of Psychology at the University of Haifa, Israel.
