Sommario/riassunto

Following the attacks of September 11, 2001 and the anthrax letters, the ability to detect biological threats as quickly as possible became a top priority. In 2003 the Department of Homeland Security (DHS) introduced the BioWatch program--a federal monitoring system intended to speed detection of specific biological agents that could be released in aerosolized form during a biological attack. The present volume evaluates the costs and merits of both the current BioWatch program and the plans for a new generation of BioWatch devices. BioWatch and Public Health Surveillance also examines infectious disease surveillance through hospitals and public health agencies in the United States, and considers whether BioWatch and traditional infectious disease surveillance are redundant or complementary.

Sommario/riassunto

This textbook for psychotherapists and group therapists encourages the reader to reflect on their own group experiences throughout their life journey and to relate these insights to therapy processes. Psychological life and personal development always occur within networks. Analytical group therapy utilizes this and makes psychological processes visible that often remain unclear in individual treatments. Our understanding of human psychological development is transforming in light of neuroscientific findings and against the backdrop of the complex societal challenges of our time, evolving into a view of humans as social animals. We are witnessing a resurgence in group therapy and an openness to theories that emphasize our mutual dependence in a positive sense. Togetherness and solidarity can thus be practiced collectively, unleashing transformative power for change in individuals, but also for society. Many relatable examples, especially from therapeutic groups, illustrate this. Written for: Psychotherapists, group therapists, group leaders in the medical and social fields. About the Author: Dipl. Psych. Volker Münch, Psychological Psychotherapist in private practice in Munich. Teaching analyst, supervisor, and lecturer at MAP, Munich. Publications on topics such as therapeutic attitude, digitalization, and midlife crisis. The translation was done with the help of artificial intelligence. A subsequent human revision was done primarily in terms of content. This book is a translation of an original German edition. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation.
