Sommario/riassunto

Modernity is surrounded by an almost magic aura that casts a spell over people all over the world. To connect with modernity, various ways and means are used, among them magic practices and religious ideas. Dynamics of Religion in Southeast Asia: Magic and Modernity deals with the magic in and of modernity and asks about its current significance for the dynamics of religion in Southeast Asia. Drawing on recent ethnographic research in this area, the contributors to this wide-ranging volume demonstrate how religious concepts contribute to meeting the challenges of modernity. Against this background, religion and modernity are no longer perceived as in contradiction; rather, it is argued that a revision of the western notion of religion is required to understand the complexity of 'multiple modernities' in a globalised world. Dynamics of Religion in Southeast Asia: Magic and Modernity is part of the series Global Asia, published by Amsterdam University Press (AUP) in close collaboration with the International Institute for Asian Studies (IIAS)

Sommario/riassunto	This open-access book combines traditional economic methods with newer machine learning techniques such as regression trees and random forests to analyse data and provide an in-depth analysis of inequality of opportunity and poverty in India. Using data from national surveys and unique sources like night-time satellite images and location data of points of interest, it explores different aspects of inequality and poverty. The book adopts a unique interdisciplinary approach, blending theories and methods from sociology, economics, geography, anthropology, and computer science to explore three key aspects of human well-being: income, health, and education, focusing on regional disparities. It aims to offer practical insights for policymakers and researchers who want to address social and economic

inequalities in India.
