

1. Record Nr.	UNINA9910999665003321
Titolo	Advanced Information Networking and Applications : Proceedings of the 39th International Conference on Advanced Information Networking and Applications (AINA-2025), Volume 7 // edited by Leonard Barolli
Pubbl/distr/stampa	Cham : , : Springer Nature Switzerland : , : Imprint : Springer, , 2025
ISBN	9783031877810 3031877810
Edizione	[1st ed. 2025.]
Descrizione fisica	1 online resource (XXXII, 420 p. 129 illus., 115 illus. in color.)
Collana	Lecture Notes on Data Engineering and Communications Technologies, , 2367-4520 ; ; 251
Disciplina	620.00285
Soggetti	Engineering - Data processing Computational intelligence Artificial intelligence Data Engineering Computational Intelligence Artificial Intelligence
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Machine learning approaches for detecting subclinical mastitis in dairy animals: A brief review of recent literature -- Predictive Algorithms for Maintenance Planning and Optimization in Industrial Applications -- Spatial-aware Enhancement Based dehazing Method for Low Illumination Images -- An Efficient Secure Outsourcing Modular Exponentiation Algorithm in Single Server Setting -- A Framework for SLA Violation Prevention in Cloud of Things Environment -- Augmented Reality in the Archaeological Museum "Padre A. G. Saggi" of Norma -- Leveraging Topic Models to Extract Tourist Preference from Points of Interest Descriptions -- Degree-Oriented Deterministic Approach for Maximum Independent Set -- Large Language Models: An Empirical Study in Computer Science -- Decentralized Marketplace for Maintenance of Electric Vehicles -- Real-Time Video Stream Processing: Spark-Based Sub-Stream Generation for Scalable Analytics.
Sommario/riassunto	Networks of today are going through a rapid evolution and there are

many emerging areas of information networking and their applications. Heterogeneous networking supported by recent technological advances in low power wireless communications along with silicon integration of various functionalities such as sensing, communications, intelligence and actuations are emerging as a critically important disruptive computer class based on a new platform, networking structure and interface that enable novel, low-cost and high-volume applications. Several of such applications have been difficult to realize because of many interconnection problems. To fulfill their large range of applications different kinds of networks need to collaborate and wired and next generation wireless systems should be integrated in order to develop high performance computing solutions to problems arising from the complexities of these networks. This volume covers the theory, design and applications of computer networks, distributed computing and information systems. The aim of the volume "Advanced Information Networking and Applications" is to provide latest research findings, innovative research results, methods and development techniques from both theoretical and practical perspectives related to the emerging areas of information networking and applications.
