| 2. Record Nr. | UNINA9910780862403321 |
| Titolo | Digital formations [[electronic resource] ] : IT and new architectures in the global realm / / edited by Robert Latham and Saskia Sassen |
| Pubbl/distr/stampa | Princeton, N.J., : Princeton University Press, c2005 |
| ISBN | 1-282-45807-8 <br> 1-282-93585-2 <br> 9786612935855 <br> 9786612458071 <br> 1-4008-3161-X |
| Edizione | [Course Book] |
| Descrizione fisica | 1 online resource (381 p.) |
| Classificazione | 05.20 |
| Altri autori (Persone) | LathamRobert <1956-> <br> SassenSaskia |
| Disciplina | 303.48/33 |
| Soggetti | Information technology <br> Computer networks <br> Communication, International |
| Lingua di pubblicazione | Inglese |
| Formato | Materiale a stampa |
| Livello bibliografico | Monografia |
| Note generali | Description based upon print version of record. |
| Nota di bibliografia | Includes bibliographical references and index. |
| Nota di contenuto | Digital formations : constructing an object of study / Robert Latham and Saskia Sassen -- Recombinant technology and new geographies of association / Jonathan Bach and David Stark -- Electronic markets and activist networks : the weight of social logics in digital formation / Saskia Sassen -- ; The new mobility of knowledge : digital information systems and global flagship networks / Dieter Ernst -- Cooperative networks and the rural-urban divide / D. Linda Garcia -- Networks, information, and the rise of the global Internet / Robert Latham -- ; The political economy of open source software and why it matters / Steven Weber -- ; Designing information resources for transboundary conflict early warning networks / Hayward R. Alker -- Discourse architecture and very large-scale conversation / Warren Sack -- Transnational communication and the European demos / Lars-Erik Cederman and Peter A. Kraus -- Information technology and state capacity in China / Doug Guthrie. |
| Sommario/riassunto | Computer-centered networks and technologies are reshaping social |

relations and constituting new social domains on a global scale, from virtually borderless electronic markets and Internet-based large-scale conversations to worldwide open source software development communities, transnational corporate production systems, and the global knowledge-arenas associated with NGO networks. This book explores how such "digital formations" emerge from the ever-changing intersection of computer-centered technologies and the broad range of social contexts that underlie much of what happens in cyberspace. While viewing technologies fundamentally in social rather than technical terms, Digital Formations nonetheless emphasizes the importance of recognizing the specific technical capacities of digital technologies. Importantly, it identifies digital formations as a new area of study in the social sciences and in thinking about globalization. The ten chapters, by leading scholars, examine key social, political, and economic developments associated with these new configurations of organization, space, and interaction. They address the operation of digital formations and their implications for the development of longstanding institutions and for their wider contexts and fields, and they consider the political, economic, and other forces shaping those formations and how the formations, in turn, are shaping such forces. Following a conceptual introduction by the editors are chapters by Hayward Alker, Jonathan Bach and David Stark, Lars-Erik Cederman and Peter A. Kraus, Dieter Ernst, D. Linda Garcia, Doug Guthrie, Robert Latham, Warren Sack, Saskia Sassen, and Steven Weber.

| | Nota di contenuto | Two-Dimensional Tables and Simple Logistic Regression -- Three-Dimensional Tables -- Logistic Regression, Logit Models, and Logistic Discrimination -- Independence Relationships and Graphical Models -- Model Selection Methods and Model Evaluation -- Models for Factors with Quantitative Levels -- Fixed and Random Zeros -- Generalized Linear Models -- The Matrix Approach to Log-Linear Models -- The Matrix Approach to Logit Models -- Maximum Likelihood Theory for Log-Linear Models -- Bayesian Binomial Regression. Exact Conditional Tests. - Correspondence Analysis. |
| | Sommario/riassunto | This book examines statistical models for frequency data. The primary focus is on log-linear models for contingency tables but also includes extensive discussion of logistic regression. Topics such as logistic discrimination, generalized linear models, and correspondence analysis are also explored. The treatment is designed for readers with prior knowledge of analysis of variance and regression. It builds upon the |

relationships between these basic models for continuous data and the analogous log-linear and logistic regression models for discrete data. While emphasizing similarities between methods for discrete and continuous data, this book also carefully examines the differences in model interpretations and evaluation that occur due to the discrete nature of the data. Numerous data sets from fields as diverse as engineering, education, sociology, and medicine are used to illustrate procedures and provide exercises. A major addition to the third edition is the availability of a companion online manual providing R code for the procedures illustrated in the book. The book begins with an extensive discussion of odds and odds ratios as well as concrete illustrations of basic independence models for contingency tables. After developing a sound applied and theoretical basis for frequency models analogous to ANOVA and regression, the book presents, for contingency tables, detailed discussions of the use of graphical models, of model selection procedures, and of models with quantitative factors. It then explores generalized linear models, after which all the fundamental results are reexamined using powerful matrix methods. The book then gives an extensive treatment of Bayesian procedures for analyzing logistic regression and other regression models for binomial data. Bayesian methods are conceptually simple and unlike traditional methods allow accurate conclusions to be drawn without requiring large sample sizes. The book concludes with two new chapters: one on exact conditional tests for small sample sizes and another on the graphical procedure known as correspondence analysis.
