Sommario/riassunto	This report provides an in-depth analysis of the data quality and structure of the ERiK-Surveys 2020, a national study conducted by the German Youth Institute (DJI) to assess the structural quality of early childhood education and care (ECEC) in Germany. The publication explores survey implementation, data collection processes, response

rates, and the weighting procedures used to ensure representativeness. It also introduces the datasets generated and evaluates their informative value at both federal and state levels. This work is part of a broader initiative to monitor and improve ECEC systems, involving contributions from policymakers, researchers, and practitioners. Designed for scholars, policymakers, and professionals in education and social sciences, the report emphasizes evidence-based approaches to enhancing ECEC quality.
