

1. Record Nr.	UNINA9911004765203321
Titolo	Photoreactive organic thin films // edited by Zouheir Sekkat, Wolfgang Knoll
Pubbl/distr/stampa	Amsterdam ; ; Boston, : Academic Press, c2002
ISBN	1-281-00835-4 0-08-047997-9
Descrizione fisica	1 online resource (582 p.)
Altri autori (Persone)	SekkatZouheir KnollWolfgang
Disciplina	621.3815/2
Soggetti	Photoreactive organic thin films Photoisomerization Photoreactive organic thin films - Industrial applications
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	CONTENTS; CONTRIBUTORS; PREFACE; I: PHOTOISOMERIZATION AND PHOTO-ORIENTATION OF AZOBENZENES; 1 Photoisomerization of Benzenes; 1.1 Introduction; 1.2 The Azo Group; 1.3 Azoaromatics of the Azobenzene Type; 1.4 Azoaromatics of the Aminoazobenzene Type; 1.5 Azoaromatics of the Pseudo-Stilbene Type; 1.6 The Isomerization Mechanism; 1.7 Concluding Remarks; 2 Ultrafast Dynamics in the Excited States of Azo Compounds; 2.1 Introduction; 2.2 Experimental Section; 2.3 Results and Discussion; 3 Photo-Orientation by Photoisomerization; 3.1 Introduction; 3.2 Photoisomerization of Azobenzenes 3.3 Photo-Orientation by Photoisomerization 3.4 Photo-Orientation of Azobenzenes: Individualizable Isomers; 3.5 Photo-Orientation of Azo Dyes: Spectrally Overlapping Isomers; 3.6 Photo-Orientation of Photochromic Spiropyrans and Diarylethenes; 3.7 Conclusion; APPENDIX 3A: Quantum Yields Determination; APPENDIX 3B: Demonstration of Equations 3.12 through 3.15; II: PHOTOISOMERIZATION IN ORGANIC THIN FILMS; 4.1 Introduction; 4.4 Polymer Structural Effects on Photo-Orientation; 4.5 Pressure Effects on Photoisomerization and Photo-Orientation; 4.6 Conclusion

5 Chiral Polymers with Photoaffected Phase Behavior for Optical Data Storage
5.1 Introduction; 5.3 Photoinduced Birefringence in Photochromic IsoSm* Copolymers; 5.4 Holographic Grating Recording; 5.5 Photoinduced Alignment of Low Molar Mass Liquid Crystals; 5.6 Photoaffected Phase Behavior and the LCPT Photorecording; 5.7 Conclusions; 6 Photoisomerization in Langmuir-Blodgett-Kuhn Structures; 6.1 Introduction; 6.2 Other Dyes Used in Photoactive LBK Films; 6.3 UV-Vis Spectroscopy as an Analytical Tool for the Investigation of Azobenzene LBK Film Structure
6.4 Examples of the Influence of Structure on Photoisomerization
6.5 Examples of the Manipulation of LBK Film Structure by Photoisomerization; 6.6 Examples of LBK Films with a Structure Tailored for the Desired Application; 6.7 Summary; 7 Electronic and Optical Transduction of Photoisomerization Processes at Molecular- and Bimolecular-Functionalized Surfaces; 7.1 Introduction; 7.2 Electronically Transduced Photochemical Switching of Organic Monolayers and Thin Films; 7.3 Electronically Transduced Photochemical Switching of Enzyme Monolayers
7.5 Recognition Phenomena at Surfaces Using Photoisomerizable Guest or Host Components
7.6 Interlocked Compounds as Mechanical Components at Photoisomerizable Interfaces; 7.7 Conclusions; III: PHOTOCHEMISTRY AND ORGANIC NONLINEAR OPTICS; 8 Photoisomerization Effects in Organic Nonlinear Optics: Photo-Assisted Poling and Depoling and Polarizability Switching; 8.1 Introduction; 8.2 Photo-Assisted Poling; 8.3 Photo-Induced Depoling; 8.4 Polarizability Switching by Photoisomerization; 8.5 Conclusion; APPENDIX 8A: From Molecular to Macroscopic Nonlinear Optical Properties
9 Photoisomerization in Polymer Films in the Presence of Electrostatic and Optical Fields

Sommario/riassunto

Wolfgang Knoll is a former Director of Polymer research at the Max Planck Institute. He is extremely well known for his research in this area. Zouheir Sekkat was a Postdoctoral researcher at Max Planck working under Professor Knoll. With Knoll's involvement, we can be confident that the best people in this field will be contributing to the reference.
