#### Sommario/riassunto

This book examines the sociolinguistics of some of Iran's languages at home and in the diaspora. The first part of the book examines the politics of minority languages and the presence of hegemonic discourses which favour Persian (Farsi) in Iran, exploring issues such as language maintenance and shift, linguistic ideologies and practices among Azerbaijani and Kurdish-speaking communities. The authors then go on to examine Iranians' linguistic ideologies, practices and (trans)national identity construction in the diaspora, investigating both the challenges of maintaining a home language and the strategies and linguistic repertoires employed when constructing a diasporic identity away from home. This book will be of interest to students and scholars of minority languages and communities, diaspora and migration studies, and language policy and planning. Seyed Hadi Mirvahedi is a Postdoctoral Fellow in Linguistics and Multilingual Studies at Nanyang Technological University, Singapore. Prior to taking up his fellowship at Nanyang Technological University, he completed his PhD at Victoria University of Wellington, New Zealand.

Sommario/riassunto	Unrivalled in its coverage and unique in its hands-on approach, this guide to the design and construction of scientific apparatus is essential reading for every scientist and student of engineering, and physical, chemical, and biological sciences. Covering the physical principles

governing the operation of the mechanical, optical and electronic parts of an instrument, new sections on detectors, low-temperature measurements, high-pressure apparatus, and updated engineering specifications, as well as 400 figures and tables, have been added to this edition. Data on the properties of materials and components used by manufacturers are included. Mechanical, optical, and electronic construction techniques carried out in the lab, as well as those let out to specialized shops, are also described. Step-by-step instruction supported by many detailed figures, is given for laboratory skills such as soldering electrical components, glassblowing, brazing, and polishing.
