Sommario/riassunto

This is Volume 5 of a Handbook that has been well-received by the thermal analysis and calorimetry community. All chapters in all five volumes are written by international experts in the subject. The fifth volume covers recent advances in techniques and applications that complement the earlier volumes. The chapters refer wherever possible to earlier volumes, but each is complete in itself. The latest recommendations on Nomenclature are also included. Amongst the important new techniques that are covered are micro-thermal analysis, pulsed thermal analysis, fast-scanning calorimetry and th

Sommario/riassunto	Terrorism is to create a state of terror and fear. This book is concerned with the consequences of acts of terror, and their impact on populations. It describes what citizens, professionals and governments can do to mitigate the consequences. It focuses more on culture and place specific reactions than the timeless or universal trauma reactions.
