

1. Record Nr.	UNINA9911006710203321
Autore	Amziane Sofiane
Titolo	Bio-Based Building Materials
Pubbl/distr/stampa	Zurich : , : Trans Tech Publications, Limited, , 2022 ©2022
ISBN	9781523145331 1523145331 9783035736991 3035736995
Edizione	[1st ed.]
Descrizione fisica	1 online resource (898 pages)
Collana	Construction Technologies and Architecture ; ; v.Volume 1
Altri autori (Persone)	SonebiMohammed
Soggetti	Building materials Biological products
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Bio-Based Building Materials -- Preface -- Table of Contents -- Mechanical Properties and Durability of Bamboo Fibers/Bamboo-Fiber-Mixed Spray Mortar for Slope Protection -- Experimental Investigation on Mechanical and Acoustic Performance of Miscanthus - Lime Composites -- An Experimental Investigation on Suitability of Using Sisal Fibers in Reinforced Concrete Composites -- Analyse of the Evolution of the Hygrothermal Properties of the Hemp-Based Mortar within the Framework of the Total Weathering Protocol -- Thermal Insulation Blocks Made of Sunflower Pith Particles and Polysaccharide-Based Binders: Influence of Binder Type and Content on Their Characteristics -- Effects of 0-30% Wood Ashes as a Substitute of Cement on the Strength of Concretes -- Influence of High Temperatures on the Mechanical Properties of Wood Bio-Concretes -- Environmental Performance of Wood Bioconcretes with Different Wood Shavings Treatments -- Comprehensive Characterization of Agricultural By-Products for Bio-Aggregate Based Concrete -- Experimental Study on Restoration of Deteriorated Timber due to Termites by Resin Filling -- Natural Fibers vs. Synthetic Fibers Reinforcement: Effect on Resistance of Mortars to Impact Loads --

Effect of Natural and Polypropylene Fibers on early Age Cracking of Mortars -- Mechanical Properties of Rammed Earth Stabilized with Local Waste and Recycled Materials -- Life Cycle Assessment of Circular Bio-Based Construction -- Water Sensitivity of Hemp-Foam Concrete -- Seashells and Oyster Shells: Biobased Fine Aggregates in Concrete Mixtures -- Experimental Analysis of the Behavior of Straw Biocomposite Exposed to High Temperature -- Experimental Investigation of the Compatibility of Lime Coating with Insulation Straw Biocomposite -- Assessment of the Influence of the Type of Filler Materials on the Properties of Cement Grouts. Comparative Study of Metakaolin and Zeolite Tuff Influence on Properties of High-Strength Concrete -- Thermal and Moisture Buffering Properties of Novel Hemp-Lime Composites Integrated with Microencapsulated Phase Change Materials -- Experimental and Numerical Study of Hygrothermal Behaviour of a Washing Fines Hemp Test Wall -- Evaluation of Bio-Based Earth Engineered Mortars for Low Energy and Carbon Buildings in Tropical and Subtropical Climates -- Physical, Thermal and Microstructural Characterization of Earth Mortars Stabilized with Incorporating Air Additive -- First Step towards the Upscaling of the Production of Washing Fines - Hemp Composite. Study of Multiphysical Properties -- Mechanical Compression and Crushing Properties of a Straw-Lime Material -- Erosion Behaviour of Bio-Stabilised Earthen Materials -- Linseed Oil and Xanthan Gum: Promising Stabilisers for Earthen Building Materials -- Bio-Stabilised Earthen Blocks: A Critical Study on Compression Tests of Immersed Samples -- Evaluation of a Marine Dredged Sediment as Raw Material Compared to Volcanic Scoria for the Development of Lime-Pozzolan Eco-Binders -- Earth-Based Mortars: Mix Design, Mechanical Characterization and Environmental Performance Assessment -- How can a Climate-Neutral Building Look Like? -- How Reliable is the Thermal Conductivity of Biobased Building Insulating Materials Measured with Hot Disk Device? -- An Experimental Study on Clay and Sand Mixes to Develop a Non-Linear Homogenized Model for Earth Construction Materials -- Research for Substantiation to Upscale Bio-Based Materials in the Construction Industry -- Effect of Mix Proportions on Fresh and Rheological Properties of Cementitious Mixture Containing Natural Fibre: Modelling Using Factorial Design -- Mechanical Properties and Fracture Energy of Concrete Beams Reinforced with Basalt Fibres. Experimental Investigation on the Fracture Energy and Mechanical Behaviour of Hemp and Flax Fibre FRC Compared to Polypropylene FRC -- Properties of Phragmites australis for Insulating Concrete Application -- Self-Desiccation of a Vernacular CSA Binder -- Experimental Out-of-Plane Behaviour of a Rammed Earth Sub-Assemblage Subjected to Seismic Inputs -- Customising Microstructural and Mineralogical Characteristics of Hydrated Lime Using Biopolymers -- Study of the Impact of Rice Straw Particle Size on the Mechanical and Thermal Properties of Straw Lime Concretes -- Comparison of Numerical HMT Codes to Simulate MBV Test of Hemp-Earth Composites -- Water Stabilization of Clay Bricks with Improved Tannin and Iron Mixes -- Tackling Variability of Clay to Provide a Robust Binder -- Microstructural Characterization of Prefabricated Hempcrete Blocks -- Reflections on the Environmental Impact of 'Vegetarian' Buildings, and on the Reliability of Databases -- Effect of Plant Fibres on the Variability of Cob Materials -- Improved Magnesium Cement for Durable Hemp Composite Boards -- Micro-Macro Modelling Approach of Vegetal Wools Thermal Conductivity -- Development of GHG Emissions Curves for Bio-Concretes Specification: Case Study for Bamboo, Rice Husk, and Wood Shavings Considering the Context of

Different Countries -- Life Cycle Assessment of a Wall Made of Prefabricated Hempcrete Blocks -- Starch Reinforcement of Raw Earth Constructions -- Successful Circular Bio-Based Construction Initiatives: Five Essentials from Case Studies -- Construction Field Monitoring of a COB Prototype Building -- Earth Plastered Wall Heating as a Low-Emitting, Cost-Effective and Robust Energy System for Building Renovation -- Substitution of Synthetic Fibers by Bio-Based Fibers in a Structural Mortar.

Rheology, Mechanical Performance and Penetrability through Flax Nonwoven Fabrics of Lime Pastes -- Effect of Viscosity Modifying Agent on the Performance of Hybrid Bio-Based Concrete -- Cyclodextrin Substituted Polyoxyethylene in the Synthesis of Polycarboxylate Superplasticizers -- Efficiency of Bio-Sourced Composites in Confining Recycled Aggregates Concrete -- Recovery of Excavated Materials as an Alternative Solution to Earth Building Materials -- Overcoming the Perceptual Gap: Worldwide Perceived Comfort Survey of Earthen Building Experts and Homeowners -- Biological Stabilisers in Earthen Construction: A Mechanistic Understanding of their Response to Water-Ingress -- What Makes Cow-Dung Stabilised Earthen Block Water-Resistant -- Influence of the Variability of Limestone and Fly Ash on the Setting and Mechanical Properties of a Moroccan Composite Cement -- Effect of Immersion/Freezing/Drying Cycles on the Hygrothermal and Mechanical Behaviour of Hemp Concrete -- Interactions of Biobased Rheology Modifying Agents with Superplasticizer in Cement Paste -- Contribution on the Use of Household Waste as Bio-Admixture -- Traditional Gypsum Pavements with Natural Additives -- A Dual-Scale Numerical Model for the Diffusive Behaviour Prediction of Biocomposites Based on Randomly Oriented Fibres -- Risk for Mould Growth on Hemp-Lime at Different Relative Humidity -- Organic Brick -- Plant Biomass Used for Green Concrete: A Review of Treatment Methods -- Variability Assessment of the Compressive and Tensile Strength of Fibred Earthen Composites -- Synthesis of the Current Knowledge Concerning the Construction of French Traditional Cob Building for Giving Recommendations -- Hygrothermal Behaviour of Air Lime Coatings with Mussel Shell Sand.

Evaluation of GHG Emissions from the Production of Cross-Laminated Timber (CLT): Analysis of Different Life Cycle Inventories -- Physical Properties and Hygrothermal Behavior of Mycelium-Based Composites as Foam-Like Wall Insulation Material -- Mycelium Composites and their Biodegradability: An Exploration on the Disintegration of Mycelium-Based Materials in Soil -- Performance of Alfa Fibres in Cementitious Materials Exposed to Diverse Surface Treatments -- Stabilization of Dicalcium Silicate-Zn Composite Approaching Layered Double Hydroxide Structure for Bioactive Cement Applications -- Reed as a Thermal Insulation Material: Experimental Characterisation of the Physical and Thermal Properties -- Investigation of Thermal, Mechanical and Acoustic Performance of Bio-Materials Based on Plaster-Gypsum and Cork -- Physico-Chemical Characterization of the Electric Arc Furnace Slag (EAFS) of the Sonasid-Jorf Steelworks - Morocco -- Hydro-Mechanics Coupling on Rammed Earth Material: Drying Experiment at Structural Scale -- Influence of Palm Oil Fibers Length Variation on Mechanical Properties of Reinforced Crude Bricks -- Impact of Biobased Surfactants on Hygrothermal Behaviour of Gypsum Foams -- Flexural Behavior of Six Species of Italian Bamboo -- Shear Behavior of Bamboo Reinforced Concrete Beams -- Improving Performance of Thermal Modified Wood against Termites with Bicine and Tricine -- 3D Modelling of Hydric Transfers in Spruce Wood with Consideration of Sorption Hysteresis -- Development of Animal Fibres

Composites for Construction Applications -- Use of Hemp Fibres in 3D Printed Concrete -- Effect of the Treatments of the Surface on Mechanical Performance of Concrete Containing Chemical Admixtures -- Development of Airlaid Non-Woven Panels for Building's Thermal Insulation.
Valorization of Vegetal Fibers in Anti-Fissuration Screed Mortar Formulation.

Sommario/riassunto

Selected peer-reviewed full text papers from the 4th International Conference on Bio-Based Building Materials (ICBBM 2021) Selected peer-reviewed full text papers from the 4th International Conference on Bio-Based Building Materials (ICBBM 2021), June 16-18, 2021, Barcelona, Spain.
