Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. [305]-306).
Nota di contenuto	section 1. Hydrocarbons -- section 2. Alcohols -- section 3. Glycol ethers -- section 4. Chlorinated solvents -- section 5. Ketones -- section 6. Ethers -- section 7. Esters -- section 8. Miscellaneous solvents.
Sommario/riassunto	The properties of 72 of the most commonly used solvents are given, tabulated in the most convenient way, making this book a joy for industrial chemists to use as a desk reference. The properties covered are those which answer the basic questions of: Will it do the job? Will it harm the user? Will it pollute the air? Is it easy to handle? Will it pollute the water? Can it be recovered or incinerated? These are all factors that need to be considered at the early stages of choosing a solvent for a new product or process. A collection of the physical properties of most commonly used
