

1. Record Nr.	UNINA9911007014303321
Autore	Lancaster Robert J
Titolo	Metal Additive Manufacturing
Pubbl/distr/stampa	Zurich : , : Trans Tech Publications, Limited, , 2020 ©2020
ISBN	9783035737523 3035737525
Edizione	[1st ed.]
Descrizione fisica	1 online resource (722 pages)
Collana	Specialized Collections ; ; v.Volume 13
Altri autori (Persone)	FortunatoAlessandro KolishnychenkoStanislav
Disciplina	671.3/7
Soggetti	Powder metallurgy
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Metal Additive Manufacturing -- Preface -- Table of Contents -- Chapter 1: Powder Bed Fusion (PBF) -- Microstructure of Built Part Obtained by Powder Bed Fusion Process with Metal -- Powder Bed Fusion of Biomedical Co-Cr-Mo and Ti-6Al-4V Alloys: Microstructure and Mechanical Properties -- Impact Testing of H13 Tool Steel Processed with Use of Selective Laser Melting Technology -- Comparison of Hardness of Surface 316L Stainless Steel Made by Additive Technology and Cold Rolling -- Electrochemical Characterization of Ti6Al4V Components Produced by Additive Manufacturing -- X-Ray CT Investigation of Graded Ti-Ti64 Material Produced by Selective Laser Melting -- Effect of Selective Laser Melting Process Parameters and Heat Treatment on Microstructure and Properties of Titanium Alloys Produced from Elemental Powders -- Investigation of Functional Graded Steel Parts Produced by Selective Laser Melting -- Formation of Structure in Titanium Lightweight Structures Made by Selective Laser Melting -- Physical and Tensile Properties of NiTi Alloy by Selective Electron Beam Melting -- Metallic Materials Prepared by Selective Laser Melting: Part Orientation Issue -- Microstructure and Mechanical Properties of Ti-6Al-4V Alloy Samples Fabricated by Selective Laser Melting -- Selective Laser Melting of Multi-Principal NiCrWFeTi Alloy: Processing, Microstructure and

Performance -- Heat Transfer and Phase Formation through EBM 3D-Printing of Ti-6Al-4V Cylindrical Parts -- Comparative Study of the Ultrafine-Grained Structure 316L Stainless Steel and Ti-6-4 Alloy Produced by Selective Laser Melting -- Energy Absorbing Properties of the Cellular Structures with Different Wall Thickness, Produced by the Selective Laser Melting -- Mechanical Properties and Fatigue Resistance of 3D Printed Inconel 718 in Comparison with Conventional Manufacture.

Control of Deviations in Lattice Structures Manufactured by Selective Laser Melting -- Selective Laser Melting of AlSi12 Powder -- Single Track Formation during Selective Laser Melting of Ti-6Al-4V Alloy -- Solidification and Microstructural Control in Selective Electron Beam Melting of Co-29Cr-10Ni-7W Alloy -- Fabrication of the Beta-Titanium Alloy Rods from a Mixture of Pure Metallic Element Powders via Selected Laser Melting -- Microstructure and Fatigue Properties of TiAl with Unique Layered Microstructure Fabricated by Electron Beam Melting -- Melting and Solidification Behavior of High-Strength Aluminum Alloy during Selective Laser Melting -- Fabrication of Cu-Al-Ni Shape Memory Alloy by Selective Laser Melting Process -- Microstructure Characterization of AlSi10Mg Fabricated by Selective Laser Melting Process -- Comparison of the Hot Working Behavior of Wrought, Selective Laser Melted and Electron Beam Melted Ti-6Al-4V -- Laser Based Manufacturing of Ti6Al4V: A Comparison of LENS and Selective Laser Melting -- Experimental Study on Pore-Defect by Selective Laser Melting of 316L Stainless Steel -- Wettability Behavior of Ti6Al4V Electron Beam Melted Surfaces -- Use of Selective Laser Melting for Manufacturing the Porous Stack of a Thermoacoustic Engine -- Selective Laser Melting of Ti42Nb Composite Powder and the Effect of Laser Re-Melting -- Laser Assisted High Entropy Alloy Coating on Low Carbon Steel -- Contribution of Additive Manufacturing of Rare Earth Material to the Increase in Performance and Resource Efficiency of Permanent Magnets -- Research on Forming Quality of AlSi10Mg Powder for SLM Process -- Chapter 2: Direct Energy Deposition (DED) -- Laser Cladding of Heat-Resistant Iron Based Alloy -- Characteristics and Evolution Mechanism of Solidification Microstructure for Laser Additive Manufactured Ti2AlNb-Based Alloy.

An Experimental Characterization of Powder/Substrate Interaction during Direct Metal Deposition for Additive Manufacturing -- From Powder to Solid: The Material Evolution of Ti-6Al-4V during Laser Metal Deposition -- Microstructure and Mechanical Properties of Ti-6.5Al-3.5Mo-1.5Zr-0.3Si Alloy Fabricated by Arc Additive Manufacturing with Post Heat Treatment -- Optimization of Microstructural Evolution during Laser Cladding of Ni Based Powder on GCI Glass Molds -- Air-Cooling Influence on Wire Arc Additive Manufactured Surfaces -- Electron and Laser Beam Additive Manufacturing with Wire - Comparison of Processes -- Influence of Technological Parameters of Direct Laser Deposition Process on the Structure and Properties of Deposited Products from Alloy Ti-6Al-4V -- Experimental Investigation of Temperature Distribution during Wire-Based Laser Metal Deposition of the Al-Mg Alloy 5087 -- Microstructural Characteristics of Laser Metal Deposited Magnesium Alloy AZ31 -- Additive Manufacturing of Titanium Parts Using 3D Plasma Metal Deposition -- Research of the Structure Defects at Wire-Feed Laser and Laser-Arc Deposition with AlMg6 -- Chapter 3: Cold Spray -- Architected Multi-Metallic Structures Prepared by Cold Dynamic Spray Deposition -- Cold Spray for Additive Manufacturing: Possibilities and Challenges -- Investigation of Aluminum Composite Produced by Laser-Assisted Cold Spray Additive Manufacturing -- Additive Manufacturing of a CNT/Al6Si

Composite with the Nanolaminated Architecture via Cold Spray
 Deposition -- Cold Sprayed Additive Manufacturing of SiC/Al Metal
 Matrix Composite: Synthesis, Microstructure, Heat Treatment and
 Tensile Properties -- Chapter 4: Metal Matrix Composites -- Cladding
 of Stellite-6/WC Composites Coatings by Laser Metal Deposition.
 The Effect of Laser Power on the Microstructure of the Nb-Si Based In
 Situ Composite, Fabricated by Laser Metal Deposition -- Microstructure
 and Mechanical Properties of TiB₂/ Al-Si Composites Fabricated by TiG
 Wire and Arc Additive Manufacturing -- Selective Laser Melting of
 Nanocomposite Ti-6Al-4V and TiC Powder -- Selective Laser Melting of
 Ti/cBN Composite -- The Preparation of TiC/TiN Composites by
 Selective Laser Melting -- Fabrication and Tailoring Interface Structure
 of Diamond/Al (and Al₁₂Si) Composites for Heat Sink Applications by
 Vacuum Hot Pressing and Selective Laser Melting -- Quasicrystalline
 Composites by Additive Manufacturing -- Additive Manufacturing of
 Ti-6Al-4V with Added Boron: Microstructure and Hardness Modification
 -- Selective Laser Melting of Mixed EP648-Alumina Powder -- Selective
 Laser Fusion of Titanium Based Gradient Alloy Reinforced by Nano
 Sized TiC Ceramic -- Chapter 5: Powder Characteristics -- Effects of
 the Delivery Tube Diameter on the Qualities of Cu-9.7Sn-0.2P Alloy
 Powder Produced by Gas Atomization -- Development of Bio-
 Compatible Beta Ti Alloy Powders for Additive Manufacturing for
 Application in Patient-Specific Orthopedic Implants -- Research
 Progress of Preparation Technology of Nano Copper Powder for 3D
 Printing -- Obtaining Spherical Powders of Grade 5 Alloy for
 Application in Selective Laser Melting Technology -- The Study of the
 Characteristics of Metallic Powders after Electroerosion Dispersion --
 Water Atomized 17-4 PH Stainless Steel Powder as a Cheaper
 Alternative Powder Feedstock for Selective Laser Melting --
 Compositional Optimization of In718 Superalloy Powder for Additive
 Manufacturing -- Characterization of Gas Atomized Ti-6Al-4V Powders
 for Additive Manufacturing -- Developing New Materials for Electron
 Beam Melting: Experiences and Challenges.
 Metallographic Analysis of the Suitability of a WC-Co Powder Blend for
 Selective Laser Melting Technology -- The Influence of Powder Particle
 and Grain Size on Parts Manufacturing by Powder Bed Fusion -- Effect
 of Powder Type and Particles Size on Microstructure of Selective Laser
 Sintered Parts -- Chapter 6: Process Parameters -- The Energy Density
 as a Reliable Parameter for Characterization of Selective Laser Melting
 of Various Alloys -- Selective Laser Melting of Inconel 718 under High
 Power and High Scanning Speed Conditions -- Effects of Process
 Parameters on Morphologies and Microstructures of Laser Melting
 Deposited V-5Cr-5Ti Alloys -- Optimizing HIP and Printing Parameters
 for EBM Ti-6Al-4V -- The Challenges Associated with the Formation of
 Equiaxed Grains during Additive Manufacturing of Titanium Alloys --
 Preliminary Analysis of Soft Magnetic Material Properties for Additive
 Manufacturing of Electrical Machines -- Influence of Building
 Parameters on Surface Aspect and Roughness in Additive Manufactured
 Metal Parts -- Chapter 7: Post-Processing and Machining -- Influence
 of Abrasive Materials in Fluidised Bed Machining of AlSi10Mg Parts
 Made through Selective Laser Melting Technology -- Secondary
 Machining Characteristics of Additive Manufactured Titanium Alloy Ti-
 6Al-4V -- Effects of Heat Treatment on Compressive Behavior of
 Porous Aluminum Manufactured by SLM -- Effects of Heat Treatment
 on Unique Layered Microstructure and Tensile Properties of TiAl
 Fabricated by Electron Beam Melting -- Heat Treatment Behavior of the
 18Ni300 Maraging Steel Additively Manufactured by Selective Laser
 Melting -- Influence of Heat Treatment on Microstructure and

Mechanical Properties of Selective Laser Melted TiAl6V4 Alloy -- Effect of Optimized Heat Treatments on the Tensile Behavior and Residual Stresses of Selective Laser Melted AlSi10Mg Samples.
Assessment of Heat Treatment Effect on AlSi10Mg by Selective Laser Melting through Indentation Testing.

Sommario/riassunto

Aggregated Book.
