

1. Record Nr.	UNINA9911007039803321
Autore	Kibert Charles J.
Titolo	Sustainable construction : green building design and delivery // Charles J. Kibert
Pubbl/distr/stampa	Hoboken, NY : , : Wiley, , [2022] ©2022
ISBN	9781119706458 1119706459
Edizione	[Fifth edition.]
Descrizione fisica	1 online resource
Disciplina	690.028/6
Soggetti	Sustainable construction Sustainable buildings - United States - Design and construction Green technology - United States Sustainable architecture
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di contenuto	<p><P>Preface</p> <p>Chapter 1 Introduction and Overview 1</p></p> <p><p>The Shifting Landscape of Green Buildings</p> <p>The Roots of Sustainable Construction</p> <p>The Vocabulary of Sustainable Development and Sustainable Construction</p> <p>Rationale for High-Performance Buildings</p> <p>State and Local Green Building Initiatives</p> <p>Green Building Progress and Obstacles</p></p> <p><p>Trends in High-Performance Green Building</p> <p>Book Organization</p> <p>Case Study: Bloomberg European Headquarters</p> <p>Summary and Conclusions</p> <p>Part I Green Building Foundations </p> <p>Chapter 2 Background</p> <p>The Driving Forces for Sustainable Construction</p></p> <p><p>Ethics and Sustainability</p> <p>Basic Concepts and Vocabulary</p> <p>Major Environmental and Resource Concerns</p> <p>The Green Building Movement</p> <p>Case Study: OWP 11, Stuttgart, Germany</p> <p>Summary and Conclusions</p> <p>Chapter 3 Ecological Design </p></p> <p><p>Design Versus Ecological Design</p> <p>Contemporary Ecological Design</p> <p>Key Green Building Publications: Early</p>

1990s</p> <p>Key Thinking about Ecological Design</p> <p>Evolving the Concept of Ecological Design</p> <p>Thermodynamics: Limits on Recycling and the Dissipation of Materials</p> <p>Case Study: Kroon Hall, Yale University, New Haven, Connecticut</p> <p>Synthesis</p> <p>Summary and Conclusions</p> <p>Part II Assessing High-Performance Green Buildings </p> <p>Chapter 4 Green Building Assessment</p> <p>Purpose of Green Building Assessment Systems</p> <p>Major Green Building Assessment Systems Used in the US</p> <p>International Building Assessment Systems</p> <p>Summary and Conclusions</p> <p>Chapter 5 The US Green Building Council LEED Building Rating System </p> <p>Brief History of LEED</p> <p>Structure of the LEED Suite of Building Rating Systems</p> <p>LEED Credentials</p> <p>LEED v4.1 Structure and Process</p> <p>Green Building Certification Institute Relationship to the USGBC and LEED</p> <p>LEED Certification Process</p> <p>LEED Building Design and Construction Rating System</p> <p>Regional Priority</p> <p>Case Study: Stephen C. O'Connell Center at UF in Gainesville, Florida</p> <p>Summary and Conclusions</p> <p>Chapter 6 The Green Globes Building Assessment System</p> <p>Green Globes Building Rating Tools</p> <p>Structure of Green Globes for New Construction</p> <p>Section 1: Project Management</p> <p>Section 2: Site</p> <p>Section 3: Energy</p> <p>Section 4: Water</p> <p>Section 5: Materials</p> <p>Section 6: Indoor Environment</p> <p>Green Globes Assessment and Certification Process</p> <p>Green Globes Professional Credentials</p> <p>Case Study: Health Sciences Building, St. Johns River State College,</p> <p>St. Augustine, Florida</p> <p>Summary and Conclusions</p> <p>Part III Green Building Design </p> <p>Chapter 7 The Green Building Design Process </p> <p>Conventional versus Green Building Delivery Systems</p> <p>High-Performance Green Building Delivery System</p> <p>Executing the Green Building Project</p> <p>Owner Issues In High-Performance Green Building Projects</p> <p>Setting Priorities And Making Other Key Initial Decisions</p> <p>Selecting The Green Building Team</p> <p>Role Of The Leed Accredited Professional Or Green Globes Professional In The Process</p> <p>Integrated Design Process</p> <p>Role of the Charrette in the Design Process</p> <p>Green Building Documentation Requirements</p> <p>LEED Documentation</p> <p>Green Globes Documentation</p> <p>Case Study: Theaterhaus, Stuttgart, Germany</p> <p>Summary and Conclusions</p> <p>Chapter 8 The Sustainable Site and Landscape</p> <p>Land and Landscape Approaches for Green Buildings</p> <p>Land Use Issues</p> <p>Sustainable Landscapes</p> <p>Green, or living, roofs</p> <p>Vertical landscaping</p> <p>Enhancing ecosystems</p> <p>Enhancing Ecosystems</p> <p>Stormwater Management</p> <p>Low-Impact Development</p> <p>Heat Island Mitigation</p> <p>Light Trespass and Pollution Reduction</p> <p>Assessment of Sustainable Sites: The Sustainable Sites Initiative</p> <p>Case Study: Iowa Utilities Board/Consumer Advocate Office</p> <p>Summary and Conclusions</p> <p>Chapter 9 Low-Energy Building Strategies </p> <p>Building Energy Issues</p> <p>High-Performance Building Energy Design Strategies</p> <p>HVAC Systems</p> <p>Water-Heating Systems</p> <p>Electrical Power System Components</p> <p>Innovative Energy Optimization Strategies</p> <p>Smart Buildings and Energy Management Systems (EMS)</p> <p>Ozone Depleting Chemicals in HVAC Systems</p> <p>Case Study: The

Pertamina Energy Tower -- A Primer on Sustainable Skyscraper Design

Design

Chapter 10 Built Environment Hydrologic Cycle

Global Water Resource Depletion

Hydrologic Cycle Terminology

Benefits of Water Efficiency

High-Performance Building Hydrologic Cycle Strategy

Building Plumbing Fixture and Controls

Nonportable Water Sources

Wastewater Strategies

Baseline Water Model Example

Use of Low-Flow Fixture Strategy

Use of Alternative Water Sources Strategy

Case Study: Lott Clean Water Alliance, Olympia, Washington

Blackwater Case Study: Blackwater Recycling System, Salesforce Tower, San Francisco

Summary and Conclusions

Chapter 11 Closing Materials Loops

The Challenge of Materials and Product Selection

Selecting Building Materials and Products with a Focus on A Closed-Loop Materials System

Life Cycle Assessment

Materials and Product Certification

Key and Emerging Construction Materials and Products

Case Study Of Closing The Loop: Ecoworx® Carpet Tiles

Design for Deconstruction and Disassembly

Case Study: Project XX Office Building, Delft, Netherlands

Summary and Conclusions

Chapter 12 Built Environment Carbon Footprint

Human Impact on the Biogeochemical Carbon Cycle

Climate Change and the Carbon Cycle

Climate Change Mitigating

Defining the Carbon Footprint of The Built Environment

Reducing the Carbon Footprint of the Built Environment

Focusing on Mitigating Project Climate Change Impact

Carbon Neutrality and Its Applicability to Buildings

Focusing on Mitigating Project Climate Change Impacts

Carbon Neutrality Case Study: The Hong Kong Zero Carbon Building

Carbon Neutrality Case Study: Glaxosmithkline Carbon Neutral Laboratory for Sustainable Chemistry (Nottingham, Uk)

Carbon Footprint Case Study: Rinker Hall, University of Florida

Chapter 13 Indoor Environmental Quality

Indoor Environmental Quality: The Issues

Integrated IEQ Design

Addressing the Main Components of Integrated IEQ Design

HVAC Systems and IEQ

Emissions from Building Materials

The WELL and FITWEL Building Standards

Summary and Conclusions

Part IV Green Building Implementation

Chapter 14 Construction Operations and Commissioning

Site Protection Planning

Managing Indoor Air Quality during Construction

Construction Materials Management

Construction and Demolition Waste Management

Commissioning

Summary and Conclusions

Chapter 15 Green Building Economics

General Approach

The Business Case for High-Performance Green Buildings

Economics of Green Building

Quantifying Green Building Benefits

Managing First Costs

Tunneling through the Cost Barrier

Summary and Conclusions

Chapter 16 Resilience Resilience in the Context of Sustainable Construction

Resilience Concepts and Scope

Codes and Standards for Built Environment Resilience

Designing Resilient Buildings

Green Building Assessment and Resilience

are designed, built, and operated at a high level of energy and water efficiency, appropriate use of land and landscaping, use environmentally friendly materials, with special attention to life cycle. According to the World Green Building Trends 2018 SmartMarket Report by Dodge Data and Analytics in partnership with USGBC, a survey of over 2,000 participants from 87 countries, shows that global green building activity continues its ascent with almost half of total respondents expecting to build more than 60% of their projects as green buildings by 2021. More than half of respondents believe that rating systems such as LEED provide rigorous third-party verification that ensures buildings operate sustainably. The top triggers globally for green building activity are client demand, environmental regulation and occupant health"--
