Sommario/riassunto	In the theory of stationary spatial point processes, Palm distributions are used to describe the point process seen from one of its points. Such an intrinsic frame of reference is not only interesting for theoretical considerations, but also useful in related fields such as queuing theory and stochastic geometry.

Sommario/riassunto	Foreign Currency Volatility and the Market for French Modernist Art examines how the collapse of the French franc in the decades following the First World War activated powerful 'push' and 'pull' economic forces that compelled French art collectors to monetise their collections while simultaneously elevating the purchasing power of international art collectors. These factors are shown to have played a significant, and previously under-recognised role, in the large-scale translocation of French modernist art that radically accelerated its commercial and critical reception across the globe and positioned it at the apex of the newly established hierarchy of modern art.

Sommario/riassunto	This book comprises of selected and peer-reviewed papers presented at the 2024 7th International Conference on Green Energy and Environment Engineering (CGEEE 2024), in Seoul, South Korea during July 4-6, 2024. The conference is sponsored by University of Seoul, Korea, co-sponsored by Jeju National University, and Jeju Green Environment Centre, which aims to bring together innovative academics and industrial experts from all over the world. Topics discussed at the conference include environmental pollution and control, wastewater treatment, climate change and ecosystems management, environmental restoration, environmental regulation and monitoring, environmental systems approach, energy efficiency, energy management. These chapters provide scientists and researchers with the latest advancements in the field of green energy and environment engineering. The book will prove a useful reference to researchers, practitioners, and policy makers.

Sommario/riassunto	Process Industry Economics: Principles, Concepts and Applications, Second Edition, explores the fundamentals of market evaluation, capital and operating cost estimation, and profitability evaluation, along with their implications for process technology evaluation, project development and investment decisions. Sections cover time dependent technology evolution in process plants, including scale development, performance improvement in new and operating plants, and learning related to environmental, safety and sustainability assessments. Influences on capital investment decisions, including capacity planning and environmental considerations are explored and supported by case studies. Finally, the aspects of overall industry performance and drivers are discussed.
