

1. Record Nr.	UNINA9911007275203321
Autore	Spelman David
Titolo	Computational Fluid Dynamics Modeling in Water Infrastructure : Best Practices
Pubbl/distr/stampa	Reston : , : American Society of Civil Engineers, , 2023 ©2023
ISBN	9781523161935 1523161930 9780784485125 0784485127
Edizione	[1st ed.]
Descrizione fisica	1 online resource (71 pages)
Altri autori (Persone)	YeeTien PathapatiSrikanth BeckKade J LeeJohnny KnatzCarrie WangRuo-Qian ZhangJie Camacho-RinconRene KamojjalaSri
Soggetti	Computational fluid dynamics Hydraulic engineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Cover -- Half Title -- Title Page -- Copyright Page -- Contents -- Preface -- Contributors -- Acknowledgments -- Chapter 1 : Introduction -- References -- Chapter 2 : Domain Geometry and Process Models -- 2.1 Problem Formulation -- 2.2 Case Complexity -- 2.3 Adequacy of Two-Dimensional versus Three-Dimensional Modeling Approaches -- 2.4 Consideration of Coordinate Systems -- 2.5 Computational Fluid Dynamics Software Selection -- 2.6 Timescales -- 2.7 Domain Geometry -- 2.8 Scale of the Problem -- 2.9 Process Models -- 2.9.1 Physical Process Models -- 2.9.2

Biological Process Models -- 2.9.3 Chemical Process Models --
References -- Chapter 3 : Meshing -- 3.1 Mesh Types -- 3.2
Characteristics of a Good-Quality Mesh -- 3.3 Mesh Size -- 3.4
Meshing Strategy -- References -- Chapter 4 : Initial and Boundary
Conditions -- 4.1 General Considerations -- 4.2 Defining
Turbulence Closure Conditions at Boundaries -- 4.3 Cell Zone
Conditions -- References -- Chapter 5 : Numerical Methods -- 5.1
Discretization of Equations -- 5.2 Coupled versus Segregated Solver
-- 5.3 Controlling the Rate of Convergence and Stability -- 5.3.1
Underrelaxation Factors -- 5.3.2 Solution Initialization -- 5.3.3
Time-Dependent Solutions -- 5.4 Choice of Numerical Scheme --
References -- Chapter 6 : Choosing Turbulence Schemes -- 6.1
Turbulent-Resolving Strategies -- 6.1.1 Direct Numerical Simulation
-- 6.1.2 Large-Eddy Simulation -- 6.1.3 Reynolds-Averaged
Navier-Stokes -- 6.2 Reynolds-Averaged Navier-Stokes Closure
Models -- Reference -- Chapter 7 : Grid Independence Tests -- 7.1
How to Test for Sufficient Grid Resolution -- 7.2 Case Study --
References -- Chapter 8 : Model Verification, Calibration, and
Validation -- 8.1 Sources of Uncertainty in Engineering Computational
Fluid Dynamics Simulations.
8.2 Verification -- 8.3 Calibration -- 8.4 Validation -- References
-- Chapter 9 : Documentation and Reporting -- Chapter 10 : Quality
Control -- 10.1 Quality Control Procedures -- 10.2 Why Quality
Control Is Important -- Chapter 11 : Conclusions -- Index.

Sommario/riassunto

This publication introduces a general framework for providing the best computational fluid dynamics modeling practices for water infrastructure design and retrofit. It serves as a primer for developing future material for applications in the water and wastewater fields.
