Sommario/riassunto	This Liber Amicorum honors Otto Adang, a prominent figure in the fields of biology, ethology, and police research. With over two hundred publications, Adang's work has significantly contributed to police and social psychology, criminology, and public safety. His career evolved from studying aggressive behavior in chimpanzees to addressing violence and public order. Adang is known for bridging the gap between academia and practical application, particularly within police education and training. The book consists of three thematic sections:

research methods in police studies, public order and aggression, and the role of animals in ethology. It is a testament to Adang's lifelong dedication to integrating research, education, and practical policing. The intended audience includes academics, law enforcement professionals, and students interested in criminology and police studies.
