Sommario/riassunto	NEW TO THIS EDITION: Revised and expanded chapters throughout incorporate significant changes in the field of dynamic child treatment over the last 15 years. New clinical illustrations represent a wide range of presenting problems from venues such as family service, community

mental health, and outpatient child psychiatry, and illustrate aspects of therapeutic communication with children through metaphors. KEY FEATURES: Transcriptions of the actual stories told by children and reconstructions of specific therapeutic responses demonstrate how such techniques are actually used, lending additional clarity to clinical material. Specific information on how to use children's projective stories in dynamic clinical assessment helps readers prepare to use strategies in their own clinical practice. Practical guidelines for identifying clients who are good candidates for storytelling include taking into account ...
