Sommario/riassunto

This book explores the intersection of environmental governance and international relations, focusing on the Anthropocene and its implications for world order. Edited by Elana Wilson Rowe, Paul Beaumont, and Lucas de Oliveira Paes, it examines topics such as ecological security, transboundary ecosystem governance, climate change, and green growth. The contributors analyze hierarchical dynamics, sovereignty, and cooperation in addressing global environmental challenges. Through interdisciplinary perspectives, the book aims to rethink international relations theory and practice in light of emerging ecological and geopolitical realities. Targeted at scholars, policymakers, and students of global governance and environmental politics, it seeks to provide insights into the governance of nature and its role in reshaping international systems.
