

1. Record Nr.	UNINA9911009381703321
Autore	Sinha G. R
Titolo	Advances in Modern Sensors : Physics, Design, Simulation and Applications
Pubbl/distr/stampa	Bristol : , : Institute of Physics Publishing, , 2020 ©2020
ISBN	9780750341141 0750341149
Edizione	[1st ed.]
Descrizione fisica	1 online resource (367 pages)
Collana	IOP Series in Sensors and Sensor Systems Series
Altri autori (Persone)	PatelBhagwati Charan GoelNaveen ThakurKavita VyasPrafulla DeshmukhKusumanjali MehtaNeeraj LiJin LiuZilong NHema
Soggetti	Intelligent sensors Wearable technology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Preface -- Acknowledgments -- Editor biography -- G R Sinha -- List of contributors -- Chapter 1 Introduction to sensors -- 1.1 Introduction -- 1.2 Sensor characteristics -- 1.2.1 Transfer function -- 1.2.2 Full-scale input (FSI) -- 1.2.3 Full-scale output (FSO) -- 1.2.4 Accuracy -- 1.2.5 Calibration -- 1.2.6 Hysteresis -- 1.2.7 Non-linearity -- 1.2.8 Resolution -- 1.2.9 Saturation -- 1.2.10 Repeatability -- 1.2.11 Dead band -- 1.2.12 Reliability -- 1.2.13 Output characteristics -- 1.2.14 Impedance -- 1.2.15 Excitation -- 1.2.16 Dynamic characteristics -- 1.2.17 Precision -- 1.2.18 Environmental factors -- 1.2.19 Uncertainty -- 1.2.20 Application characteristics -- 1.3 Types of sensors -- 1.3.1 Temperature sensors -- 1.3.2 Position sensors --

1.3.3 Light sensors -- 1.3.4 Sound sensor -- 1.3.5 Proximity sensor --
1.3.6 Accelerometer -- 1.3.7 Infrared sensor -- 1.3.8 Pressure sensor
-- 1.3.9 Ultrasonic sensors -- 1.3.10 Touch sensor -- 1.3.11 Humidity
sensor -- 1.3.12 Colour sensor -- 1.3.13 Chemical sensor -- 1.3.14
Seismic sensor -- 1.3.15 Magnetic sensor -- 1.4 Comparison of
different sensors -- 1.5 Modern sensors -- 1.6 Conclusions --
References -- Chapter 2 Classification and characteristics of sensors --
2.1 Introduction -- 2.2 Classification -- 2.3 Commonly used sensors
and their features -- 2.4 Transfer function -- 2.5 Characteristics of
sensors -- 2.6 Sensors should meet the following basic requirements
-- 2.7 Factors for choosing sensors -- 2.8 Conclusion -- References --
Chapter 3 Optical sensors: overview, characteristics and applications --
3.1 Introduction -- 3.2 Optical sensors: fundamentals -- 3.2.1 Modes
of operation -- 3.2.2 Light sources for optical sensors -- 3.2.3
Advantages of optical sensors -- 3.3 Optical sensing devices
(detectors) -- 3.3.1 Photoemissive cells (photoemitters).
3.3.2 Photoresistor or light dependent resistors -- 3.3.3 Photodiodes
-- 3.3.4 Phototransistor -- 3.3.5 Infrared sensors -- 3.3.6 Fiber optic
sensor -- References -- Chapter 4 Recent applications of chalcogenide
glasses (ChGs) based sensors -- 4.1 ChGs based sensors: a brief
introduction -- 4.2 Fabrication and molding of ChGs in the form of
different devices for sensing applications -- 4.2.1 Infrared optical
fibers -- 4.2.2 Infrared optical lenses -- 4.2.3 Thin film membranes --
4.3 Description of some principals behind the sensing applications --
4.3.1 Attenuated total internal reflection -- 4.3.2 Fiber evanescent
wave spectroscopy -- 4.3.3 Thermal imaging -- 4.4 Some exclusive
examples of sensing applications of ChGs based sensors -- 4.4.1
Application in bio-sensing and food security -- 4.4.2 Early cancer
diagnostics -- 4.4.3 Monitoring of pollutants in groundwater -- 4.4.4
Night vision systems for surveillance assignments -- 4.4.5 Monitoring
of global warming -- 4.4.6 Other significant applications -- 4.5
Conclusions -- References -- Chapter 5 Advanced dynamic and static
calibration methods for optical imaging sensors -- 5.1 Introduction --
5.2 Principle of camera calibrations -- 5.2.1 Position determination
principle using optical cameras -- 5.2.2 Camera calibration principle --
5.2.3 Camera calibration model -- 5.2.4 Distortion model in camera
calibration -- 5.3 Dynamic calibration approaches -- 5.3.1 The
principle of the dynamic camera calibration -- 5.3.2 Calibration model
used for the dynamic calibration -- 5.3.3 Dynamic calibration with
multi-aperture MEMS light lead-in devices -- 5.4 Static calibration
principle with mSOL -- 5.4.1 Static calibration general principle --
5.4.2 Static calibration principle with DOEs -- 5.4.3 Calibration
configurations with mSOL -- 5.4.4 Calibration theory.
5.4.5 The position extraction approach of the predefined target images
-- 5.4.6 Applied examples -- 5.5 Discussion and future development
directions -- 5.6 Conclusion -- References -- Chapter 6 Smart and
wearable sensors used in numerous modern applications and their
significance -- 6.1 Introduction -- 6.2 Smart sensors properties --
6.2.1 Self-calibration -- 6.2.2 Reliability or self-health assessment --
6.2.3 Self-healing -- 6.2.4 Compensated measurements -- 6.2.5 Self-
adaptability: exchange accuracy for speed and vice versa -- 6.3 Smart
sensors types -- 6.4 Smart sensor applications -- 6.4.1 Smart cities --
6.4.2 Smart environment -- 6.4.3 Smart factories -- 6.5 Case study:
smart home surveillance system using a smart camera -- 6.6 Wearable
sensors -- 6.7 Applications of wearable sensors -- 6.7.1
Programmable bio-electric ASIC sensors -- 6.7.2 Diabetes wearable
medical device -- 6.7.3 Cancer detecting wearable device -- 6.7.4
Wearable sweat-sensor -- 6.7.5 Wearable peritoneal dialysis device --

6.7.6 Predicting the progress of Alzheimer's and dementia diseases -- 6.7.7 Monitoring Parkinson's disease -- 6.7.8 Vision-related biosensors -- 6.8 Conclusion -- References -- Chapter 7 Smart stick for the visually impaired -- 7.1 Introduction -- 7.2 Smart blind stick -- 7.3 Hardware description -- 7.3.1 Arduino UNO -- 7.3.2 Ultrasonic sensor -- 7.3.3 Water sensor -- 7.3.4 GPS module -- 7.3.5 LDR-light dependent resistor -- 7.3.6 Alarm unit -- 7.4 Results -- 7.4.1 Ultrasonic sensor -- 7.4.2 Detection of water by water sensor -- 7.4.3 Detection of light by using LDR -- 7.4.4 Location of the stick -- 7.5 Conclusion -- References -- Chapter 8 Smart and wearable sensors -- 8.1 Introduction -- 8.2 Features of smart sensors -- 8.3 Evaluation of smart sensors -- 8.3.1 Third-generation -- 8.3.2 Fourth-generation -- 8.3.3 Fifth-generation. 8.4 Design of a smart sensor -- 8.4.1 Data acquisition -- 8.4.2 Data transfer -- 8.4.3 Data processing -- 8.5 Consequences -- 8.5.1 Advantages of smart sensor -- 8.5.2 Disadvantages -- 8.6 General applications -- 8.7 Wearable sensors -- 8.7.1 Need for wearable sensors -- 8.7.2 Smart sensor as a wearable sensor -- 8.8 Wearable sensor devices -- 8.8.1 Wristwatches architecture and performance -- 8.8.2 Electronic T-Shirt architecture and working principle -- 8.8.3 BP monitoring using PPG -- 8.9 Conclusion -- References -- Chapter 9 Cognitive and biosensors: an overview -- 9.1 Introduction and background -- 9.2 Cognitive sensors -- 9.2.1 Research challenges -- 9.2.2 Application of cognitive sensors -- 9.2.3 Cognitive sensors and machine learning -- 9.2.4 Cognitive sensors and security threats -- 9.3 Biosensors -- 9.3.1 Research challenges -- 9.3.2 Application of biosensors -- 9.4 Conclusion -- Acknowledgment -- References -- Chapter 10 Sensor technologies combined with AI helping in smart transport systems as driverless cars -- 10.1 History of driverless cars using smart sensors -- 10.2 Automation levels -- 10.3 Sensors and other technologies used by manufacturing companies -- 10.4 Design components -- 10.5 Sensor technology -- 10.5.1 GPS -- 10.5.2 LiDAR -- 10.5.3 Cameras -- 10.5.4 Radar sensors -- 10.5.5 Ultrasonic sensors -- 10.6 Challenges and future research -- 10.7 Conclusions -- References -- Chapter 11 Recent advancements in smart and wearable sensors -- 11.1 Introduction -- 11.1.1 Basics of SWSs -- 11.1.2 Working principle of a smart sensor -- 11.2 Types of wearable sensors -- 11.2.1 Optical sensors -- 11.2.2 Physical sensors -- 11.2.3 Chemical sensors -- 11.2.4 Multiplexed sensors -- 11.2.5 Wireless sensors -- 11.3 Challenges in wearable chemical sensors and possible solutions -- 11.3.1 Materials-based challenges with possible solution. 11.3.2 Operational challenges and possible solutions -- 11.4 Conclusion and future direction -- References -- Chapter 12 Design and implementation of a wearable gaze tracking device with near-infrared and visible-light image sensors -- 12.1 Introduction -- 12.2 Proposed wearable gaze tracking design -- 12.2.1 Near-infrared image sensor based wearable eye tracker design [13, 14] -- 12.2.2 Visible-light image sensor based wearable eye tracker design [17-19] -- 12.2.3 Calibration and gaze tracking function for wearable eye tracking device -- 12.3 Experimental results and comparisons -- 12.4 Conclusion and future works -- Acknowledgments -- References -- Chapter 13 Vibration powered wireless sensor networks-harvesting energy from good vibrations -- 13.1 Introduction -- 13.2 literature survey -- 13.2.1 Piezoelectric sensors -- 13.2.2 Modeling and analysis of a bimorph piezoelectric cantilever beam for voltage generation -- 13.2.3 Feasibility of structural monitoring with vibration powered sensors -- 13.2.4 Vibration powered wireless sensor networks -- 13.3 Existing methodology -- 13.3.1 Proposed methodology -- 13.3.2

Comparison of proposed methodology with existing methodology --
13.3.3 Advantages -- 13.3.4 Disadvantages -- 13.4 Conclusion --
References -- Chapter 14 Comprehensive review on brain-computer
interface sensor-based smart home appliances control system -- 14.1
Introduction -- 14.1.1 Motivation and requirement -- 14.2 Background
-- 14.2.1 Electroencephalography (EEG) -- 14.2.2 Brain waves --
14.2.3 EEG artifacts -- 14.2.4 Control signal of BCI -- 14.3 Step
involved in BCI-based controlling home appliances system -- 14.3.1
Data acquisition framework -- 14.3.2 Preprocessing and feature
extraction -- 14.3.3 Classification results -- 14.4 Controlling methods
based on single and multiple appliances -- 14.4.1 Single appliance
control.
14.4.2 Multiple appliance control.

Sommario/riassunto

Encompasses the physics, design characteristics, simulation and
interface electronics and including case studies, future challenges, as
well as several other aspects of wider sensor technology, Advances in
Modern Sensors provides an overview of modern sensors and their
applications. The broad scope will appeal to industrial and academic
researchers, and application engineers.
