

1. Record Nr.	UNINA9911013778803321
Autore	Frateili, Enzo
Titolo	Dieci lezioni di disegno industriale : breve storia / Enzo Frateili ; a cura di Manuela Perugia
Pubbl/distr/stampa	Milano, : FrancoAngeli, 1995
ISBN	88-204-9214-8
Descrizione fisica	112 p. ; 23 cm
Collana	Studi e ricerche del Dipartimento di programmazione, progettazione e produzione edilizia del Politecnico di Milano ; 12
Disciplina	745.209
Locazione	DARST DARPU
Collocazione	DE FUSCO 646 B 488 CAN A 514 CAN
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Sul frontespizio: Dipartimento di programmazione, progettazione e produzione edilizia-Politecnico di Milano

2. Record Nr.	UNINA9911053219303321
Titolo	Maintenance of Forest Biodiversity
Pubbl/distr/stampa	MDPI - Multidisciplinary Digital Publishing Institute, 2023
Descrizione fisica	1 online resource (258 p.)
Soggetti	Biology, life sciences Ecological science, the Biosphere Research & information: general
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Among terrestrial ecosystems, forests play a dominant role in maintaining biodiversity and providing ecosystem functioning, such as nutrient cycling, carbon sequestration, and ecosystem stability. Over the past several decades, however, global forests are facing unprecedented pressure from climate change and anthropogenic disturbances, resulting in a high rate of biodiversity loss due to deforestation, fragmentation, and degradation. Determining how to maintain biodiversity is extremely urgent if we want to achieve the aims of the Convention on Biological Diversity (CBD) and the Sustainable Development Goals (SDGs). The complex structure, species interaction, heterogenic environment, and regional species pool all affect the spatial and temporal patterns of forest species, but it is still unclear how these effects maintain long-term forest biodiversity as forests undergo rapid variations in habitat features under global change. This reprint includes sixteen published articles related to the dynamics of forest spatial structure, community assembly, forest recovery patterns after disturbance, spatial distribution of species diversity, effects of abiotic and biotic variables on understory species diversity, and above- and below-ground biotic interactions. These studies cover different forest types across varied spatial and temporal scales, as well as different biological groups (plants, birds and microbes). We

acknowledge all authors who contributed to this reprint "Maintenance of Forest Biodiversity" of Forests. We hope this reprint can improve our understanding of the underlying mechanisms of forest biodiversity maintenance.
