Livello bibliografico	Monografia
Nota di contenuto	Introduction -- Rural Drinking Water Program and Child Health -- Rural Drinking Water Program and Adolescent Cognitive Skills -- Private Sector Participation and Performance of County Water Utilities -- Increasing Block Tariffs and Household Water Savings -- Conclusion.
Sommario/riassunto	This book provides a comprehensive examination of three key water reforms in China. By leveraging unique natural experiments and employing state-of-the-art applied microeconomic methods, this book offers robust insights into the causal links between water reforms and economic outcomes in China. The book covers three major reforms: the rural drinking water program, private sector participation in urban water supply, and the adoption of Increasing Block Tariffs (IBTs) in the urban domestic water sector. It highlights how these reforms have shaped rural children's human capital development, urban water utilities' performance, and urban residents' water demand. Designed for academics, researchers, and graduate students in economics, environmental policy, and public administration, this book also appeals to policymakers, water sector professionals, and development agencies in developing countries. The content is scholarly and research-oriented, providing valuable insights into water reform policies.
