### Sommario/riassunto

This book presents a state-of-the-art portrait of entrepreneurship in the transition economies of Central and Eastern Europe (CEE) and the Commonwealth of Independent States (CIS) as well as Georgia and Ukraine. Based on new empirical evidence, it highlights major trends in, characteristics and forms of entrepreneurship common to countries in transition. The contributions cover topics such as levels of opportunity-based entrepreneurship, incentives for innovation, dominance of large-scale international corporations, the role of family businesses, and opportunities for grass-roots entrepreneurship. The first part of the book focuses on theoretical considerations regarding the establishment of sustainable entrepreneurial ecosystems and private business. In turn, the second part offers cross-border studies of entrepreneurial environments and activities, while the third and fourth present case studies on the current state and unique characteristics of entrepreneurship in various countries of the CEE and CIS. Finally, the last parts discuss the role of institutions and policy recommendations.

Sommario/riassunto	The monograph presents scenarios of situations where foreign investments suffer damage. These model scenarios are based on thorough analysis of real cases, facts from the ground and recent arbitral practice (relating namely to arbitrations against Russia, Syria or Libya). This allows the author, in the next step, to ascertain what rules are applicable to the conduct of states towards foreign investments, but also to demonstrate how they apply in real-case scenarios. In particular, the work identifies and applies to these tailored scenarios relevant norms of international investment law, international

humanitarian law and international human rights law. These regimes are relevant for protection of foreign investment, but they differ as to the situations they govern, parties whose conduct they regulate and obligations they stipulate. It is therefore appropriate to analyse in their interconnection how these rules govern typical situations that may arise during armed conflict and what particularly they prescribe. On the basis of application of these rules on the defined scenarios, the monograph focuses on the issue of applicability of investment treaties in occupied territories and on interactions and on the issue of conflict of norms in situations where foreign investments qualify as military objectives. Petr Stejskal is a senior lecturer at the Faculty of Law, Palacký University Olomouc. He is also a member of the affiliated Centre for International Humanitarian and Operational Law (jointly established by the Faculty of Law and Special Forces of the Army of the Czech Republic). He also works as a part-time officer-lawyer at the Ministry of Industry and Trade of the Czech Republic (agenda of economic resilience).
