

1. Record Nr.	UNINA9911018908103321
Autore	Madachy Raymond J (Raymond Joseph)
Titolo	Software process dynamics / / Raymond J. Madachy
Pubbl/distr/stampa	Piscataway, NJ., : Wiley-IEEE [Chichester, : John Wiley, distributor], c2008
ISBN	9786611221645 9780470653272 0470653272 9781281221643 1281221643 9780470192719 0470192712 9780470192702 0470192704
Descrizione fisica	1 online resource (627 p.)
Disciplina	005.1
Soggetti	Computer software - Development System analysis
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Foreword (Barry Boehm) -- Preface -- PART 1 FUNDAMENTALS -- Chapter 1 Introduction and Background -- 1.1 Systems, Processes, Models, and Simulation -- 1.2 Systems Thinking -- 1.3 Basic Feedback Systems Concepts Applied to the Software Process -- 1.4 Brooks's Law Example -- 1.5 Software Process Technology Overview -- 1.6 Challenges for the Software Industry -- 1.7 Major References -- 1.8 Chapter 1 Summary -- 1.9 Exercises -- Chapter 2 The Modeling Process with System Dynamics -- 2.1 System Dynamics Background -- 2.2 General System Behaviors -- 2.3 Modeling Overview -- 2.4 Problem Definition -- 2.5 Model Conceptualization -- 2.6 Model Formulation and Construction -- 2.7 Simulation -- 2.8 Model Assessment -- 2.9 Policy Analysis -- 2.10 Continuous Model Improvement -- 2.11 Software Metrics Considerations -- 2.12 Project Management

Considerations -- 2.13 Modeling Tools -- 2.14 Major References --
 2.15 Chapter 2 Summary -- 2.16 Exercises -- Chapter 3 Model
 Structures and Behaviors for Software Processes -- 3.1 Introduction --
 3.2 Model Elements -- 3.3 Generic Flow Processes -- 3.4
 Infrastructures and Behaviors -- 3.5 Software Process Chain
 Infrastructures -- 3.6 Major References -- 3.7 Chapter 3 Summary --
 3.8 Exercises -- PART 2 APPLICATIONS AND FUTURE DIRECTIONS --
 Introduction to Applications Chapters -- Chapter 4 People Applications
 -- 4.1 Introduction -- 4.2 Overview of Applications -- 4.3 Project
 Workforce Modeling -- 4.3.1 Example: Personnel Sector Model -- 4.4
 Exhaustion and Burnout -- 4.4.1 Example: Exhaustion Model -- 4.5
 Learning -- 4.6 Team Composition -- 4.7 Other Application Areas --
 4.8 Major References -- 4.9 Chapter 4 Summary -- 4.10 Exercises --
 Chapter 5 Process and Product Applications -- 5.1 Introduction -- 5.2
 Overview of Applications -- 5.3 Peer Reviews -- 5.4 Global Process
 Feedback (Software Evolution) -- 5.5 Software Reuse -- 5.6
 Commercial Off-the-Shelf Software (COTS)-Based Systems -- 5.7
 Software Architecting -- 5.8 Quality and Defects -- 5.9 Requirements
 Volatility.
 5.10 Software Process Improvement -- 5.11 Major References -- 5.12
 Provided Models -- 5.13 Chapter 5 Summary -- 5.14 Exercises --
 Chapter 6 Project and Organization Applications -- 6.1 Introduction --
 6.2 Overview of Applications -- 6.3 Integrated Project Modeling -- 6.4
 Software Business Case Analysis -- 6.5 Personnel Resource Allocation
 -- 6.6 Staffing -- 6.7 Earned Value -- 6.8 Major References -- 6.9
 Provided Models -- 6.10 Chapter 6 Summary -- 6.11 Exercises --
 Chapter 7 Current and Future Directions -- 7.1 Introduction -- 7.2
 Simulation Environments and Tools -- 7.3 Model Structures and
 Component-Based Model Development -- 7.4 New and Emerging
 Trends for Applications -- 7.5 Model Integration -- 7.6 Empirical
 Research and Theory Building -- 7.7 Process Mission Control Centers,
 Analysis, and Training Facilities -- 7.8 Chapter 7 Summary -- 7.9
 Exercises -- Appendix A: Introduction to Statistics of Simulation -- A.1
 Risk Analysis and Probability -- A.2 Probability Distributions -- A.3
 Monte Carlo Analysis -- A.4 Analysis of Simulation Input -- A.5
 Experimental Design -- A.6 Analysis of Simulation Output -- A.7 Major
 References -- A.8 Appendix A Summary -- A.9 Exercises -- Appendix
 B: Annotated System Dynamics Bibliography -- Appendix C: Provided
 Models -- References -- Index.

Sommario/riassunto

This book is designed for professionals and students in software engineering or information technology who are interested in understanding the dynamics of software development in order to assess and optimize their own process strategies. It explains how simulation of interrelated technical and social factors can provide a means for organizations to vastly improve their processes. It is structured for readers to approach the subject from different perspectives, and includes descriptive summaries of the best research and applications.
